Terminal Shock Bob DeMatteo, Chris Brookes, 1984 **NASA Technical Note**, 1973 **Proceedings of the National Aerospace Propulsion Conference** Gullapalli Sivaramakrishna, S. Kishore Kumar, B. N. Raghunandan, 2022-07-23
This book presents the select proceedings of the 3rd National Aerospace Propulsion Conference NAPC 2020. It discusses the recent trends in the area of aerospace propulsion technologies covering both air breathing and non air breathing propulsion. The topics covered include state of the art design analysis and developmental testing of gas turbine engine modules and sub systems like compressor combustor turbine and alternator advances in spray injection and atomization aspects of combustion pertinent to all types of propulsion systems and nuances of space missile and alternative propulsion systems. The book will be a valuable reference for beginners researchers and professionals interested in aerospace propulsion and allied fields.

Computational Design and Optimization of Supersonic Intakes Jatinder Pal Singh Sandhu, Ik Soo Park, Narayan Ananthkrishnan, 2025-11-26
This book offers a unique perspective on the intersection of supersonic intake design formal optimization methods and the use of computational fluid dynamics CFD for evaluating the performance of intakes. Details of the meta model and optimization scheme as well as the CFD solvers used at each stage of the optimization process are presented. Additionally, for a balanced perspective, a separate chapter presents a faster, lower fidelity alternative to RANS computation complemented by its illustrative application to hypersonic intakes. Key Features: Discusses multi objective design of supersonic intakes using formal optimization tools such as Kriging, MOGA. Leverages advancement in CFD methods and optimization techniques for practical supersonic intake design. Covers reduced order analysis of supersonic intake. Focuses on the intricate aspects of cowl design and throat shaping. Presents conical intake design with geometric constraints and TPR drag trade offs. This book is aimed at graduate students, researchers, and professionals in aircraft propulsion intake design and aerospace engineering. *NASA Technical Memorandum*, 1976 **Technical Note - National Advisory Committee for Aeronautics** United States. National Advisory Committee for Aeronautics, 1950 *Method of Calculating the Lateral Motions of Aircraft Based on the Laplace Transform* Harry E. Murray, Frederick Cyril Grant, 1950
The lateral motions of aircraft are obtained by means of the Laplace transform which gives solutions in terms of elementary functions for the free motions and the motions due to forcing step functions. The lateral stability of a specific airplane and certain of its free and forced motions are calculated. *Cosmic Ray Interactions, Propagation, and Acceleration in Space Plasmas* Lev Dorman, 2006-09-02
Chapter 1 briefly describes the main properties of space plasmas and primary CR. Chapter 2 considers the problem of CR propagation in space plasmas described by the kinetic equation and different types of diffusion approximations. Chapter 3 is devoted to CR non linear effects in space plasmas caused by CR pressure and CR kinetic stream instabilities with the generation of Alfvén turbulence. In Chapter 4 different processes of CR acceleration in space plasmas are considered. The book ends with a list providing more than 1 300 full references, a discussion on future developments, and

unsolved problems as well as Object and Author indexes

Physics of Collisionless Shocks André Balogh, Rudolf A.

Treumann, 2013-01-04 The present book provides a contemporary systematic treatment of shock waves in high temperature collisionless plasmas as are encountered in near Earth space and in Astrophysics It consists of two parts Part I develops the complete theory of shocks in dilute hot plasmas under the assumption of absence of collisions among the charged particles when the interaction is mediated solely by the self consistent electromagnetic fields Such shocks are naturally magnetised implying that the magnetic field plays an important role in their evolution and dynamics This part treats subcritical shocks which dissipate flow energy by generating anomalous resistance or viscosity The main emphasis is however on super critical shocks where the anomalous dissipation is insufficient to retard the upstream flow These shocks depending on the direction of the upstream magnetic field are distinguished as quasi perpendicular and quasi parallel shocks which exhibit different behaviours reflecting particles back upstream and generating high electromagnetic wave intensities Particle acceleration and turbulence at such shocks become possible and important Part II treats planetary bow shocks and the famous Heliospheric Termination shock as examples of two applications of the theory developed in part I
