Current E. Uhlmann,2012-12-06 The direct current transmission scheme linking the island of Gotland to the main land of Sweden by means of a submarine cable under the Baltic Sea is the first commercial realisation of a modern technique for the transmission of electrical energy It is certainly not accidental that this pioneering initiative was allotted to the Gotland scheme Various viewpoints may be presented regarding this but the essential factor relates to the circumstances that permitted the magnitude of the transmitted power to be given a value which would not have been technically or economically feasible for any other project The power on the one hand was sufficiently small to justify the risk associated with such a new venture for it fell within limits acceptable both to ASEA as the manufacturer and to the Swedish State Power Board as the customer On the other hand the power was large enough to demonstrate the technical and economic characteristics of the new system and to provide the opportunity of gaining invaluable experience that could be applied to future large scale transmission systems In 1954 a team under the direction of Dr Uno Lamm successfully commissioned the Gotland scheme representing the culmination of many years of intensive development work *Frontiers of High Performance Computing and Networking* Geyong Min,2006-11-22 This book constitutes the refereed joint proceedings of ten international workshops

ISDN - The Integrated Services Digital Network Peter Bocker,2013-06-29 The present state of development of communication technology is characterized by two features namely the digital representation of all signals transnitted and processed irrespective of information type voice text data or images and the integration of systems and

services this integration only being completely possible using digital technology The boundaries between switching and transmission are shifting and functions are being redefined and redistributed between terminals and communication networks Multiservice terminals unlike telephones teleprinters video data terminals are designed to handle more than one information type Lastly the communication network allows voice text data and video information to be transmitted on the same circuit the user obtains access to this network via a non dedicated communication socket The essential features of this Integrated Services Digital Network ISDN have been standardized over the last eight years by experts from all over the world under the aegis of the CCITT 1 the international standardizing body of the carriers of public communication networks All the leading network carriers are working towards ISDN implementation because of the substantial benefits it will offer to users network carriers and manufacturers alike Users will obtain additional and advanced services most of them designated to cater for the growth in non voice traffic The ISDN subscriber access will also enable users to operate existing systems more cost effectively than via various dedicated networks
