contradictions and complexities of the cyborg therefore hold particular appeal to programme makers of dramatic TV narratives Bronwen Calvert examines the uses and representations of the cyborg in this ground breaking text by looking at its frequent appearance in a wide variety of popular and cult shows from the iconic Daleks of Doctor Who and bionic female empowerment in Terminator The Sarah Connor Chronicles to the duality of humanoid and distinctly robotic cyborgs in Battlestar Galactica In doing so she reveals how television s defining traits shape our experience of cyborgs and help us as viewers to question contemporary issues such as surveillance and terrorism as well as the function of simulation and ultimately what it means to be human **Robot Ecology and the Science Fiction Film** J. P. Telotte,2016-01-22 This book

offers the first specific application in film studies of what is generally known as ecology theory shifting attention from history to the in this case media environment It takes the robot as its subject because it has attained a status that resonates not only with some of the key concerns of contemporary culture over the last century but also with the very nature of film While the robot has given us a vehicle for exploring issues of gender race and a variety of forms of otherness and increasingly for asking questions about the very nature and meaning of life this image of an artificial being typically anthropomorphic also

invariably implicates the cinema's own and quite fundamental artificing of the human. Looking across genres across specific media forms and across closely linked conceptualizations Telotte sketches a context of interwoven influences and meanings. Cinema of Simulation: Hyperreal Hollywood in the Long 1990s Randy Laist, 2016-09-22 Hyperreality is an Alice in Wonderland dimension where copies have no originals simulation is more real than reality and living dreams undermine the barriers between imagination and objective experience. The most prominent philosopher of the hyperreal Jean Baudrillard formulated his concept of hyperreality throughout the 1980s but it was not until the 1990s that the end of the Cold War along with the proliferation of new reality bending technologies made hyperreality seem to come true. In the lost decade between the fall of the Berlin Wall and 9/11 the nature of reality itself became a source of uncertainty a psychic condition that has been recognizably recorded by that seismograph of American consciousness Hollywood cinema. The auteur cinema of the 1970s aimed for gritty realism and the most prominent feature of Reagan era cinema was its fantastic unrealism. Clinton era cinema however is characterized by a prevailing mood of hyperrealism communicated in various ways by such benchmark films as *JFK* *Pulp Fiction* and *The Matrix*. The hyperreal cinema of the 1990s conceives of the movie screen as neither a window on a preexisting social reality realism nor as a wormhole into a fantastic dream dimension escapism but as an arena in which images and reality exchange masks blend into one another and challenge the philosophical premises which differentiate them from one another. **Cinema of Simulation** Hyperreal Hollywood in the Long 1990s provides a guided tour through the anxieties and fantasies reciprocally social and cinematic which characterize the surreal territory of the hyperreal

Come With Me If You Want to Live Michael Harris, 2023-11-02 If our near future sometimes feels like a dystopian sci-fi movie that's because it is. In *Come With Me If You Want to Live* The Future as Foretold in Classic Sci-Fi Films Michael Harris reveals the hidden in plain sight meanings of the greatest science fiction films of the past fifty years the ways in which they predicted the future that we are increasingly living in but how we can still avoid the worst of what they warned us about. The 1970s saw the start of a new wave of science fiction that predicted environmental destruction out of control technology and escalating political crises. These were not the fantastical imaginings of filmmakers they were based on rising environmental consciousness and solid scientific research. The explanation of why we didn't heed these warnings might be the most important story of our time and now our future. Each

chapter focuses on a classic sci fi film among them Blade Runner Terminator 2 12 Monkeys Brazil Soylent Green and the Back to the Future series these films are used to consider our likely environmental technological and political future But taking sci fi seriously again could help us to regain our power to create different tomorrows guided by practical utopianism and to imagine new science fictions for a better world If you re wondering what the future holds maybe you ve already seen it

An Anthropology of Robots and AI Kathleen Richardson,2015-02-11 This book explores the making of robots in labs at the Massachusetts Institute of Technology MIT It examines the cultural ideas that go into the making of robots and the role of fiction in co constructing the technological practices of the robotic scientists The book engages with debates in anthropological theorizing regarding the way that robots are reimagined as intelligent autonomous and social and weaved into lived social realities Richardson charts the move away from the worker robot of the 1920s to the social one of the 2000s as robots are reimagined as companions friends and therapeutic agents
