Abstract

Introduction: The aim of the study was to examine the relationships between sleep quality, sleepiness, fatigue, resilience, and attention parameters in a sample consisting of university students.

Material and methods: The study involved 123 university students aged between 18 and 33 years. A socio-demographic data form, the Pittsburgh Sleep Quality Index (PSQI), Epworth Sleepiness Scale (ESS), Fatigue Severity Scale (FSS), Depression, Anxiety, and Stress Scale (DASS-21), and the Brief Resilience Scale (BRS) were administered to the participants. Attention assessment was conducted using the Cognitron (COG), Signal Detection (SIGNAL), Inhibition (INHIB), and Perception and Attention Functions Battery, part of the computer-based Vienna Test System (VTS).

Results: Out of all the participants, 77.2% were female, and 22.8% were male, with an average age of 21.53 (SD = 2.54) years. A positive correlation was found between COG-Corrects and PSQI scores, and COG-Incorrects and DASS-Stress. There was a negative correlation between SIGNAL-Corrects and FSS. No correlation was revealed among sleep quality, sleepiness, fatigue, resilience variables, and reaction inhibition or divided attention. Furthermore, multiple regression analysis indicated that attention scores were predicted only by sleep quality and fatigue severity.

Conclusions: Based on the study's findings, it is conceivable that situational factors such as sleep quality, sleepiness, and fatigue have a more significant impact on attention compared with constant variables such as depression, anxiety, stress, and resilience.

Key words: Vienna Test System, attention, fatigue, sleepiness, resilience.

Introduction

Attention is a primary and complex cognitive function that refers to the frontage and focus of mental resources on a stimulus. Simultaneously, it represents turning towards a stimulus while disregarding others (Posner *et al.* 2016). Attention is separated into four types: selective, sustained, executive, and divided. Selective attention refers to the capacity to focus on a particular stimulus while disregarding other distracting stimuli. Divided attention is the ability to deal with multiple stimuli simultaneously, and executive attention ensures that attention is maintained (Rueda *et al.* 2023). Sustained attention requires long-term focus on a stimulus and is regarded as a concept associated with alertness (Cohen 2013). According to contemporary theories, attention is a system that consists of

multiple brain networks with interrelated but distinct functions (Fisher 2019). Spikman and van Zomeren (2010) stated that attention has two general dimensions, selectivity and intensity; they also refer in their articles to the Vienna Test System (VTS), which is a computer-based application used in the assessment of sustained attention, focused/selective attention, and divided attention (Spikman and van Zomeren 2010).

Although attention is a parameter that multiple psychological factors can impact, there has been more focus on how specific psychological processes such as sleep, fatigue, and psychopathological processes (e.g., depression, anxiety) affect attention. Sleep has a restorative function in human life and is essential for physiologic and circadian rhythms. Quantitative and qualitative shifts in sleep influence multiple systems (Bryant

Elements of Human Performance Andries F. Sanders, Andries Sanders, 2013-02-01 This book presents a review of research on reaction processes and attention as it has evolved over the last 40 years in the context of the information processing tradition in cognitive psychology It is argued and demonstrated that issues of reaction processes and attention are closely interconnected Their common conceptualization can be seen in terms of limited processing capacity on the one hand and stage analysis on the other This volume concludes that at present a stage analysis metaphor offers better prospects as a conceptual starting point the limited capacity metaphor was strongly tied to the digital computers of the 60s The emphasis of the book is on behavioral research but summaries of related findings on evoked potentials and other psychophysiological variables are included as well From this perspective it may be of interest to neuropsychologists who want to learn about the present state of cognitive experimental paradigms *Elements of Human Performance* also addresses the question of the relationship between basic research and applications in the said areas This is particularly urgent in view of the now common notion that the results of many simplified laboratory tasks may be artifactual and of little applied value A back to back research strategy is outlined to assess the validity of basic research results for real life tasks

Aircraft Accident Report , Elements of Human Performance Andries Frans Sanders, 1998 The book focuses on 2 aspects of human performance theory reaction processes and attention These aspects are often ignored by treatments of cognitive psychology but are central to understanding an individual's performance

First, Do Less Harm Ross Koppel, Suzanne Gordon, 2012-04-23 Each year hospital acquired infections prescribing and treatment errors lost documents and test reports communication failures and other problems have caused thousands of deaths in the United States added millions of days to patients hospital stays and cost Americans tens of billions of dollars Despite and sometimes because of new medical information technology and numerous well intentioned initiatives to address these problems threats to patient safety remain and in some areas are on the rise In First Do Less Harm twelve health care professionals and researchers plus two former patients look at patient safety from a variety of perspectives finding many of the proposed solutions to be inadequate or impractical Several contributors to this book attribute the failure to confront patient safety concerns to the influence of the market model on medicine and emphasize the need for hospital wide teamwork and greater involvement from frontline workers from janitors and aides to nurses and physicians in planning implementing and evaluating effective safety initiatives Several chapters in First Do Less Harm focus on the critical role of

interprofessional and occupational practice in patient safety Rather than focusing on the usual suspects physicians safety champions or high level management these chapters expand the list of stakeholders and patient safety advocates to include nurses patient care assistants and other staff as well as the health care unions that may represent them First Do Less Harm also highlights workplace issues that negatively affect safety including sleeplessness excessive workloads outsourcing of hospital cleaning and lack of teamwork between physicians and other health care staff In two chapters experts explain why the promise of health care information technology to fix safety problems remains unrealized with examples that are at once humorous and frightening A book that will be required reading for physicians nurses hospital administrators public health officers quality and risk managers healthcare educators economists and policymakers First Do Less Harm concludes with a list of twenty seven paradoxes and challenges facing everyone interested in making care safe for both patients and those who care for them
