Microprocessor Architectures Steve Heath, 2014-06-28 Why are there all these different processor architectures and what
do they all mean Which processor will I use How should I choose it Given the task of selecting an architecture or design
approach both engineers and managers require a knowledge of the whole system and an explanation of the design tradeoffs
and their effects This is information that rarely appears in data sheets or user manuals This book fills that knowledge gap
Section 1 provides a primer and history of the three basic microprocessor architectures Section 2 describes the ways in
which the architectures react with the system Section 3 looks at some more commercial aspects such as semiconductor
technology the design cycle and selection criteria The appendices provide benchmarking data and binary compatibility
standards Since the first edition of this book was published much has happened within the industry The Power PC
architecture has appeared and RISC has become a more significant challenger to CISC The book now includes new material
on Power PC and a complete chapter devoted to understanding the RISC challenge The examples used in the text have been
based on Motorola microprocessor families but the system considerations are also applicable to other processors For this
reason comparisons to other designs have been included and an overview of other processors including the Intel 80x86 and
Pentium DEC Alpha SUN Sparc and MIPS range has been given Steve Heath has been involved in the design and
development of microprocessor based systems since 1982 These designs have included VMEbus systems microcontrollers
IBM PCs Apple Macintoshes and both CISC and RISC based multiprocessor systems while using operating systems as varied
as MS DOS UNIX Macintosh OS and real time kernels An avid user of computer systems he has written numerous articles
and papers for the electronics press as well as books from Butterworth Heinemann including VMEbus A Practical Companion
