

Subset Selection in Multiple Linear Regression

Step 1: Define a large set of potential basis functions

$$\hat{z}(x) = \beta_0 + \beta_1 x_1 + \beta_2 x_2 + \beta_3 x_1 x_2 + \beta_4 \frac{x_1}{x_2} + \beta_5 \frac{x_2}{x_1}$$

Step 2: Model reduction

$$\hat{z}(x) = \beta_0 + \beta_2 x_2 + \beta_3 \frac{x_2}{x_1}$$

Subset Selection is used to build surrogate models that are

- **Accurate** representations of higher order functions or black-box simulations
- **Simple** in functional form, tailored for algebraic optimization

Fitness Criterion

- **Balances** model complexity with reduction in empirical error
- **Penalize directly** for the number of explanatory variables in the regression model

Subset Selection in Regression Alan Miller, 2002-04-15 Originally published in 1990 the first edition of Subset Selection in Regression filled a significant gap in the literature and its critical and popular success has continued for more than a decade Thoroughly revised to reflect progress in theory methods and computing power the second edition promises to continue that tradition The author has thoroughly updated each chapter incorporated new material on recent developments and included more examples and references New in the Second Edition A separate chapter on Bayesian methods Complete revision of the chapter on estimation A major example from the field of near infrared spectroscopy More emphasis on cross validation Greater focus on bootstrapping Stochastic algorithms for finding good subsets from large numbers of predictors when an exhaustive search is not feasible Software available on the Internet for implementing many of the algorithms presented More examples Subset Selection in Regression Second Edition remains dedicated to the techniques for fitting and choosing models that are linear in their parameters and to understanding and correcting the bias introduced by selecting a model that fits only slightly better than others The presentation is clear concise and belongs on the shelf of anyone researching using or teaching subset selecting techniques

Optimal Subset Selection David Boyce, A. Farhi, R. Weischedel, 2013-03-08 In the course of one's research the expediency of meeting contractual and other externally imposed deadlines too often seems to take priority over what may be more significant research findings in the longer run Such is the case with this volume which despite our best intentions has been put aside time and again since 1971 in favor of what seemed to be more urgent matters Despite this delay to our knowledge the principal research results and documentation presented here have not been superseded by other publications The background of this endeavor may be of some historical interest especially to those who agree that research is not a straightforward mechanistic process whose outcome or even direction is known in advance In the process of this brief recounting we would like to express our gratitude to those individuals and organizations who facilitated and supported our efforts We were introduced to the Beale Kendall and Mann algorithm the source of all our efforts quite by chance Professor Britton Harris suggested to me in April 1967 that I might like to attend a CEIR half day seminar on optimal regression being given by Professor M G Kendall in Washington D C I agreed that the topic seemed interesting and went along Had it not been for Harris suggestion and financial support this work almost certainly would have never begun

The Elements of Statistical Learning Trevor Hastie,Robert Tibshirani,Jerome Friedman,2013-11-11 During the past decade there has been an explosion in computation and information technology With it have come vast amounts of data in a variety of fields such as medicine biology finance and marketing The challenge of understanding these data has led to the development of new tools in the field of statistics and spawned new areas such as data mining machine learning and bioinformatics Many of these tools have common underpinnings but are often expressed with different terminology This book describes the important ideas in these areas in a common conceptual framework While the approach is statistical the emphasis is on concepts rather than mathematics Many examples are given with a liberal use of color graphics It is a valuable resource for statisticians and anyone interested in data mining in science or industry The book s coverage is broad from supervised learning prediction to unsupervised learning The many topics include neural networks support vector machines classification trees and boosting the first comprehensive treatment of this topic in any book This major new edition features many topics not covered in the original including graphical models random forests ensemble methods least angle regression path algorithms for the lasso non negative matrix factorization and spectral clustering There is also a chapter on methods for wide data p bigger than n including multiple testing and false discovery rates *Model Selection* Parhasarathi Lahiri,2001 Select Kenneth Joseph DeMay,1971 **Optimal subset selection** D.
