Social Consequences of Internet Use James E. Katz, Ronald E. Rice, 2002-08-30 A study of the impact of Internet use on American society based on a series of nationally representative surveys conducted from 1995 to 2000 Drawing on nationally representative telephone surveys conducted from 1995 to 2000 James Katz and Ronald Rice offer a rich and nuanced picture of Internet use in America Using quantitative data as well as case studies of Web sites they explore the impact of the Internet on society from three perspectives access to Internet technology the digital divide involvement with groups and communities through the Internet social capital and use of the Internet for social interaction and expression identity To provide a more comprehensive account of Internet use the authors draw comparisons across media and include Internet nonusers and former users in their research The authors call their research the Syntopia Project to convey the Internet's role as one among a host of communication technologies as well as the synergy between people's online activities and their real world lives Their major finding is that Americans use the Internet as an extension and enhancement of their daily routines Contrary to media sensationalism the Internet is neither a utopia liberating people to form a global egalitarian community nor a dystopia producing armies of disembodied lonely individuals Like any form of communication it is as helpful or harmful as those who use it

Intimacy on the Internet Lauren Rosewarne, 2016-04-14 The focus of this book is on the media representations of the use of the Internet in seeking intimate connections be it a committed relationship a hook up or a community in which to dabble in fringe sexual practices Popular culture film narrative television the news media and advertising present two very distinct

pictures of the use of the Internet as related to intimacy From news reports about victims of online dating to the presentation of the desperate and dateless the perverts and the deviants a distinct frame for the intimacy Internet connection is negativity In some examples however a changing picture is emerging The ubiquitousness of Internet use today has meant a slow increase in comparatively more positive representations of successful online romances in the news resulting in more positive spin advertising and a more even handed presence of such liaisons in narrative television and film Both the positive and the negative media representations are categorised and analysed in this book to explore what they reveal about the intersection of gender sexuality technology and the changing mores regarding intimacy

both online and off In *Connected in Isolation* Eszter Hargittai looks at how this digital disparity played out during the unprecedented isolation imposed in the early days of the coronavirus pandemic During initial COVID 19 lockdowns the Internet for many became a lifeline as everything from family get togethers to doctor s visits moved online Using survey data collected in April and May of 2020 in the United States Italy and Switzerland Hargittai explores how people from varied backgrounds and differing skill levels were able to take advantage of digital media to find the crucial information they needed to help loved ones procure necessities understand rules and risks Her study reveals the extent to which long standing social and digital inequalities played a critical role in this move toward computer mediated communication and were often exacerbated in the process However Hargittai notes context matters her findings reveal that some populations traditionally disadvantaged with technology such as older people actually did better than others in part because of the continuing importance of traditional media television in particular The pandemic has permanently shifted how reliant we are upon online information and the implications of Hargittai s groundbreaking comparative research go far beyond the pandemic *Connected in Isolation* informs and expands our understanding of digital media including how they might mitigate or worsen existing social disparities whom they empower or disenfranchise and how we can identify and expand the skills people bring to them
