Ski, 1981-11 **Quest For Speed - Simple Guides** Peter Gosling, 2009-11-01 Man's quest for speed is driven by two ambitions One is the competitive urge to excel to go as fast as possible by any available means and preferably to go faster than anybody else The other more practical aim is to make travel and transport as swift and efficient as possible The

two are closely linked since by pushing technology to the limit to achieve the first we improve performance in the second with results that continue to shrink the world In this book Peter Gosling tells the fascinating story of the key scientific discoveries and technological breakthroughs in our drive to conquer distance from our earliest crude efforts using animal power and the wheel to harnessing the wind and the waves on through the watershed of the Industrial Revolution rail and steam the invention of the internal combustion engine through powered flight to rocketry and on to space travel We look at developments on land sea and air and the novel green solutions that scientists are exploring in order to meet today s environmental challenges Along the way we meet some of the remarkable men and women behind these breakthroughs whose vision and determination have helped to shape the modern world Written in an engaging non technical style *The Quest for Speed* captures both the thrill of the race and the adventure of science and points to the social and cultural changes ahead as technology accelerates the pace of life and transforms the human landscape

Ski ,1981-11 **Improving the Speed and Quality of Asylum Decisions** Great Britain. Parliament. House of Commons. Committee of Public Accounts,2005 The numbers of people seeking asylum in the UK peaked between 1999 and 2002 before almost halving in 2003 The high levels in applications led to a large backlog of cases awaiting an initial decision and subsequently an increased volume of appeals The Immigration and Nationality Directorate spent 1 86 billion on its operations in 2002 03 including 1 07 billion in supporting asylum applicants In the same year the Immigration Appellate Authority spent 101 million on dealing with appeals from immigration and asylum cases Following on from a NAO report on this topic HCP 535 session 2003 04 ISBN 0102928495 published in June 2004 the Committees report examines the progress made in tackling the influx of asylum applications and in improving the timeliness and quality of decision making Findings include that the Home Office should balance additional administrative costs involved in increasing staff and infrastructure resourcing to meet surges in demand against the extra costs arising if backlogs are allowed to accumulate and fast tracking procedures should be expanded with a more demanding joint target set for the Directorate and Appellate Authority for time taken to process cases and reach a decision at appeal stage

Race with the Wind Birch Matthews,2001 In the decades

leading up to World War II air races were often the proving grounds for radical new aviation principles and designs. The people and machines of air racing during this period made tremendous strides and contributed incredible new technologies: aerodynamics, powerplants, and airframes. This unique look at the key players and aircraft of the early 20th century's great air races examines and explains how innovative racing technologies found their way into future fighter and passenger aircraft. Coverage of exciting races like the Schneider Trophy, Pulitzer Trophy Race, and the National Air Races, an in-depth look at their contributions to aeronautics, exclusive line drawings illustrating the technologies, and archival photography make this a must for air racing fans and aviation enthusiasts.

Reinventing the Propeller Jeremy R. Kinney, 2017-03-24 An international community of specialists reinvented the propeller during the Aeronautical Revolution, a vibrant period of innovation in North America and Europe from World War I to the end of World War II. They experienced both success and failure as they created competing designs that enabled increasingly sophisticated and modern commercial and military aircraft to climb quicker and cruise faster using less power. *Reinventing the Propeller* nimbly moves from the minds of these inventors to their drawing boards, workshops, research and development facilities, and factories, and then shows us how their work performed in the air, both commercially and militarily. *Reinventing the Propeller* documents this story of a forgotten technology to reveal new perspectives on engineering, research and development, design, and the multi-layered social, cultural, financial, commercial, industrial, and military infrastructure of aviation.

Hero of the Air William Trimble, 2013-07-10 In this biography, William F. Trimble examines the pioneering work of Glenn Curtiss and his role in the origins of aviation in the U.S. Navy in the years up to and through World War I. A self-taught mechanic and inventor, Curtiss was a key figure in the development of the airplane during the early part of the century, and his contributions to aviation are well known. This book's careful examination of his partnership with the Navy breaks new ground in revealing significant new details of his contributions. Curtiss's links to the Navy came as a result of aviation advocates within the Navy, chief among them Captain Washington I. Chambers, who recognized that the Navy had special requirements for airplanes and their operations and for aviators and their training. Curtiss helped meet the special requirements of the service for aircraft, particularly those with the potential for operating with naval vessels at sea or in conducting long-distance flights over water. He also was instrumental in training the first naval aviators. Curtiss and the Navy continued their collaboration through World War I, reaching a climax in 1919 with the first transatlantic flight of the famed Navy Curtiss NC flying boat. This book addresses the broader implications of the Curtiss-Navy collaboration in the context of the longstanding trend of government-private cooperation in the introduction and development of new technologies. It also explores the interactive dynamics of weapons procurement and technological change within a large and entrenched bureaucracy and helps lay to rest the persistent myth that the Navy resisted the introduction of aviation.
