Spiders: Spinners of the Sticky Web Caitlind L. Alexander, 2012-01-14 You've seen them in your house and in your yard They're spiders But there is more to these little guys than just their cobwebs Spiders can be interesting if you take the time to get to know them For example do you know What part of a spider's body contains the lungs What are book lungs How many eyes does a spider have Why a spider doesn't stick to his own web How many kinds of spiders there are Find out what a spider looks like where it lives what it eats what it eats it how babies are born and other fun facts All measurements in American and metric This Educational Version includes activities designed to reinforce Common Core Curriculum Standards LearningIsland.com believes in the value of children practicing reading for 15 minutes every day Our 15 Minute Books give children lots of fun exciting choices to read from classic stories to mysteries to books of knowledge Many books are appropriate for hi-lo readers Open the world of reading to a child by having them read for 15 minutes a day **American Spiders and Their Spinning-work** Henry Christopher McCook (D.D.), 1893 **Spinning Spiders** Ruth Berman, Lerner Publishing Group, 1998-01-01 Describes the physical characteristics and behavior of spiders and how they use their silk for weaving webs and other purposes *The Spiders of Great Britain and Ireland* Michael John Roberts, 1985 *Spider Biology* Rainer Foelix, 2025-09-15 This book is based on the well established book *Biology of Spiders* but is completely updated It focuses on the biology and natural history of spiders in general it does not deal with the identification of spiders Virtually all aspects of spider biology are covered from anatomy and physiology to neurobiology and behavior or from spider venom to prey capture and from silk production to complex web construction The book will appeal not only to spider enthusiasts professional arachnologists and zoologists but to anyone with an interest in biology It is written in a clear and straightforward style making it easy to read for the general reader **Spider Webs** William Eberhard, 2020-12-22 In this lavishly illustrated first ever book on how spider webs are built function and evolved William Eberhard provides a comprehensive overview of spider functional morphology and behavior related to web building and of the surprising physical

agility and mental abilities of orb weavers For instance one spider spins more than three precisely spaced morphologically complex spiral attachments per second for up to fifteen minutes at a time Spiders even adjust the mechanical properties of their famously strong silken lines to different parts of their webs and different environments and make dramatic modifications in orb designs to adapt to available spaces This extensive adaptive flexibility involving decisions influenced by up to sixteen different cues is unexpected in such small supposedly simple animals As Eberhard reveals the extraordinary diversity of webs includes ingenious solutions to gain access to prey in esoteric habitats from blazing hot and shifting sand dunes to capture ants to the surfaces of tropical lakes to capture water striders Some webs are nets that are cast onto prey while others form baskets into which the spider flicks prey Some aerial webs are tramways used by spiders searching for chemical cues from their prey below while others feature landing sites for flying insects and spiders where the spider then stalks its prey In some webs long trip lines are delicately sustained just above the ground by tiny rigid silk poles Stemming from the author s more than five decades observing spider webs this book will be the definitive reference for years to come

Spider Silk Leslie Brunetta, Catherine L. Craig, 2010-06-08 Spiders objects of eternal human fascination are found in many places on the ground in the air and even under water Leslie Brunetta and Catherine Craig have teamed up to produce a substantive yet entertaining book for anyone who has ever wondered as a spider rappelled out of reach on a line of silk How do they do that The orb web that iconic wheel shaped web most of us associate with spiders contains at least four different silk proteins each performing a different function and all meshing together to create a fly catching machine that has amazed and inspired humans through the ages Brunetta and Craig tell the intriguing story of how spiders evolved over 400 million years to add new silks and new uses for silk to their survival toolkit and in the telling take readers far beyond the orb The authors describe the trials and triumphs of spiders as they use silk to negotiate an ever changing environment and they show how natural selection acts at the genetic level and as individuals struggle for survival
