**Spiders** Carmen Viera,Marcelo O. Gonzaga,2017-11-02 Within the last few decades arachnology in the Neotropical region has experienced a great development filling the knowledge gap in one of the most diverse regions of the world Nevertheless large geographical areas remain poorly sampled especially within the Amazon and new genera and species have been continuously discovered even in urban areas In congruence with the recent improvements in research several aspects of the ecology behaviour and natural history of spiders such as interactions with other predators and parasitoids social interactions dispersal patterns habitat requirements mating behaviors among others are being carefully investigated These recent contributions incorporate substantial information on the preexisting knowledge on these subjects every year Our main objective with this book is to present a summary on these new researches and on the currently knowledge on the main subjects involved in the general theme emphasizing the contribution of the rich fauna of the Neotropical region to the

research of behaviour and ecology of the spiders      *Ecophysiology of Spiders* Wolfgang Nentwig, 2012-12-06 Recently another book on insect physiology was published It was restricted to a few focal points as are many of these new insect physiology books but there was considerable depth in its specialized point of view We were discussing the structure of this book and of insect physiology books in general when Prof Remmert asked me and what about books on spider physiology Silence Then I started to explain oh yes there is a congress proceedings volume on this topic and there is a group with excellent publications on another topic but I felt that this answer was weak One can no longer buy the proceedings volume in a bookshop and to read a series of publications on a given topic one must search in a library for a dozen journals Why is there not a single book on spider physiology comparable with the many books on insect physiology Are spiders a scientific ivory tower far from public interest and commercial importance I do not think so although spiders are one of the many forgotten animal groups which always grew in the shadow of the insects There are research groups working on spider physiology there are fascinating phenomena in this animal group and there are plenty of exciting results Spiders may have been always underresearched but research is progressing In the last few years new books have been published e g
