

Types of Spinal Cord Injuries

There are four areas of spinal cord trauma:

Cervical:

Injury to the spinal cord in the neck, affecting the body below the head.

Thoracic:

Injury to the spinal cord in the upper back, affecting the body from the trunk downward.

Lumbar:

Injury to the spinal cord in the lower back, affecting mobility and bodily function below the waist.

Sacral:

Injury to the bottom-most portion of the spine. Damage to this area of the spinal cord generally does not result in paralysis, but sensation and bodily functions in and around the hips may be affected.

If the spinal cord is severed, the injury is classified as catastrophic, meaning the victim suffers a loss of motion and sensation from the point of injury below.

Spinal Cord Injury Institute of Medicine, Board on Neuroscience and Behavioral Health, Committee on Spinal Cord Injury, 2005-07-27 An estimated 11 000 spinal cord injuries occur each year in the United States and more than 200 000 Americans suffer from maladies associated with spinal cord injury This includes paralysis bowel and bladder dysfunction sexual dysfunction respiratory impairment temperature regulation problems and chronic pain During the last two decades longstanding beliefs about the inability of the adult central nervous system to heal itself have been eroded by the flood of

new information from research in the neurosciences and related fields. However, there are still no cures, and the challenge of restoring function in the wake of spinal cord injuries remains extremely complex. *Spinal Cord Injury* examines the future directions for research with the goal to accelerate the development of cures for spinal cord injuries. While many of the recommendations are framed within the context of the specific needs articulated by the New York Spinal Cord Injury Research Board, the Institute of Medicine's panel of experts looked very broadly at research priorities relating to future directions for the field in general and make recommendations to strengthen and coordinate the existing infrastructure. Funders at federal and state agencies, academic organizations, pharmaceutical and device companies, and non-profit organizations will all find this book to be an essential resource as they examine their opportunities.

Living with Spinal Cord Injury Adrian Cristian, 2010-11 The definitive guide for dealing with the major challenges those with spinal cord injuries face. Medical advances have made it possible for those with spinal cord injuries to live an essentially normal life span and to lead full meaningful and productive lives. Inevitably, however, spinal injury superimposes special considerations on the routine activities and passages of life, and activities that might once have been easy can in many cases become increasingly difficult. This book identifies medical and nonmedical problems that individuals with SCI face as they get older, while providing practical advice on how to tackle these challenges. Includes information on health finances, social support system, the effects of aging.
