Spline Functions And Multivariate Interpolations:

Spline Functions and Multivariate Interpolations Borislav D. Bojanov, H. Hakopian, B. Sahakian, 1993-03-31 This volume provides a comprehensive introduction to the theory of spline functions. Emphasis is given to new developments such as the general Birkhoff type interpolation, the extremal properties of splines, their prominent role in the optimal recovery of functions and multivariate interpolation by polynomials and splines. The book has thirteen chapters dealing respectively with: interpolation by algebraic polynomials, the space of splines, B-splines, interpolation by spline functions, natural spline functions, perfect splines, monosplines, periodic splines, multivariate B-splines and truncated powers, multivariate spline functions and divided differences, box splines, multivariate mean value interpolation, multivariate polynomial interpolations arising by hyperplanes and multivariate pointwise interpolation. Some of the results described are presented as exercises and hints are given for their solution. For researchers and graduate students whose work involves approximation theory.

[Spline Functions and Multivariate Interpolations](#) Borislav D. Bojanov, H. Hakopian, B. Sahakian, 2014-03-14 Spline functions entered Approximation Theory as solutions of natural extremal problems. A typical example is the problem of drawing a function curve through given n k points that has a minimal norm of its k th derivative. Isolated facts about the functions now called splines can be found in the papers of L. Euler, A. Lebesgue, G. Birkhoff, J. Favard, L. Tschakaloff. However, the Theory of Spline Functions has developed in the last 30 years by the effort of dozens of mathematicians. Recent fundamental results on multivariate polynomial interpolation and multivariate splines have initiated a new wave of theoretical investigations and variety of applications. The purpose of this book is to introduce the reader to the theory of spline functions. The emphasis is given to some new developments such as the general Birkhoff's type interpolation, the extremal properties of the splines and their prominent role in the optimal recovery of functions, multivariate interpolation by polynomials and splines. The material presented is based on the lectures of the authors given to the students at the University of Sofia and Yerevan University during the last 10 years. Some more elementary results are left as exercises and detailed hints are given.

Multivariate Splines Charles K. Chui,1988-01-01 The subject of multivariate splines has become a rapidly growing field of mathematical research The author presents the subject from an elementary point of view that parallels the theory and development of univariate spline analysis To compensate for the missing proofs and details an extensive bibliography has been included There is a presentation of open problems with an emphasis on the theory and applications to computer aided design data analysis and surface fitting Applied mathematicians and engineers working in the areas of curve fitting finite element methods computer aided geometric design signal processing mathematical modelling computer aided design computer aided manufacturing and circuits and systems will find this monograph essential to their research

Multivariate Approximation and Splines Günther Nürnberger,Jochen W. Schmidt,Guido Walz,2012-12-06 This book contains the refereed papers which were presented at the international conference on Multivariate Approximation and Splines held in Mannheim Germany on September 7 10 1996 Fifty experts from Bulgaria England France Israel Netherlands Norway Poland Switzerland Ukraine USA and Germany participated in the symposium It was the aim of the conference to give an overview of recent developments in multivariate approximation with special emphasis on spline methods The field is characterized by rapidly developing branches such as approximation data fitting interpolation splines radial basis functions neural networks computer aided design methods subdivision algorithms and wavelets The research has applications in areas like industrial production visualization pattern recognition image and signal processing cognitive systems and modeling in geology physics biology and medicine In the following we briefly describe the contents of the papers Exact inequalities of Kolmogorov type which estimate the derivatives of multivariate periodic functions are derived in PICHUGOV These inequalities are applied to the approximation of classes of multivariate periodic functions and to the approximation by quasi polynomials BAINOV DISHLIEV and HRISTOVA investigate initial value problems for non linear impulse differential difference equations which have many applications in simulating real processes By applying iterative techniques sequences of lower and upper solutions are constructed which converge to a solution of the initial value problem

Multivariate Spline Functions and Their Applications Ren-Hong Wang,2013-03-09 This book deals with the algebraic geometric method of studying multivariate splines Topics treated include the theory of multivariate spline spaces higher dimensional splines rational splines piecewise algebraic variety including piecewise algebraic curves and surfaces and applications in the finite element method and computer aided geometric design Many new results are given Audience This volume will be of interest to researchers and graduate students whose work involves approximations and expansions numerical analysis computational geometry image processing and CAD CAM

Topics in Numerical Analysis P.R. Turner,2006-11-15 Multivariate Birkhoff Interpolation Rudolph A. Lorentz,2006-11-15 The subject of this book is

Lagrange Hermite and Birkhoff lacunary Hermite interpolation by multivariate algebraic polynomials It unifies and extends a new algorithmic approach to this subject which was introduced and developed by G G Lorentz and the author One particularly interesting feature of this algorithmic approach is that it obviates the necessity of finding a formula for the Vandermonde determinant of a multivariate interpolation in order to determine its regularity which formulas are practically unknown anyways by determining the regularity through simple geometric manipulations in the Euclidean space Although interpolation is a classical problem it is surprising how little is known about its basic properties in the multivariate case The book therefore starts by exploring its fundamental properties and its limitations The main part of the book is devoted to a complete and detailed elaboration of the new technique A chapter with an extensive selection of finite elements follows as well as a chapter with formulas for Vandermonde determinants Finally the technique is applied to non standard interpolations The book is principally oriented to specialists in the field However since all the proofs are presented in full detail and since examples are profuse a wider audience with a basic knowledge of analysis and linear algebra will draw profit from it Indeed the fundamental nature of multivariate nature of multivariate interpolation is reflected by the fact that readers coming from the disparate fields of algebraic geometry singularities of surfaces of finite elements and of CAGD will also all find useful information here
