**Remembering Violence** Nicolas Argenti, Katharina Schramm, 2010 Psychologists have done a great deal of research on the effects of trauma on the individual revealing the paradox that violent experiences are often secreted away beyond easy accessibility becoming impossible to verbalize explicitly However comparatively little research has been done on the transgenerational effects of trauma and the means by which experiences are transmitted from person to person across time to become intrinsic parts of the social fabric With eight contributions covering Africa Central and South America China Europe and the Middle East this volume sheds new light on the role of memory in constructing popular histories or historiographies of violence in the absence of or in contradistinction to authoritative written histories It brings new ethnographic data to light and presents a truly cross cultural range of case studies that will greatly enhance the discussion of memory and violence across disciplines

and personhood through the bodily experiences and medical choices of patients Through case studies of patients in the context of medical pluralism Kristensen argues that medical practices are powerful social symbol indicative of overarching socio political processes As certain types of extreme and violent experiences known as olvidos lack a framework that allows them to be expressed openly they therefore surface as symptoms of an illness often with no apparent organic pathology In these contexts indigenous medicine thanks to its sensitivity to socio political contexts provides a space for articulation and management of collective experiences and suffering among patients in Southern Chile
