John L. Motloch

Tensile Structures:

Tension Structures Wanda J. Lewis, 2003 The tension structures discussed in this book are predominantly roofing forms created from pre stressed cable nets cable trusses and continuous membranes fabric structures A unique feature in their design is form finding an interactive process of defining the shape of a structure under tension The book discusses the role of stable minimal surfaces minimum energy forms occurring in natural objects such as soap films in finding optimal shapes of membrane and cable structures The discussion of form finding is extended to structural forms whose shape is supposedly known such as suspension bridge cables

Widespan Roof Structures Michael Barnes, Michael Dickson, 2000 Presents world thinking on the design and construction of large covered spaces This book aims to offer insights into many of the innovative construction design projects It explores the advances within stressed membrane roofing atria and glass structures with a focus on international developments It also addresses the problems of construction

Space Structures 5 G. A. R. Parke, P. Disney, 2002 These Proceedings are based on the Fifth International Conference on Space Structures organised by the University of Surrey Produced as a 2 volume set they contain original and innovative information on space structures from leading engineers and architects from around the world

Tensile Surface Structures Michael Seidel, 2009-05-13 Tensile surface structures are the visual expression of an intensive rethinking of the topic of building envelopes by designers Advances in design methods materials construction elements and assembly and erection planning in the field of lightweight construction are enabling ever more exacting applications of tensile structures with envelope and structural functions especially in roofing over large clear spans without internal support However the particular mechanical characteristics of the materials used in the construction of textile structures demand consideration of the question of buildability This book provides answers by discussing the fundamental influence of material manufacture and assembly in deciding the most suitable type of building or structure and its detailing in the design process The fundamentals of material composition manufacturing process patterning and the behaviour of flexible structural systems are all explained here as well as their use as structural and connection elements and special attention is given to the erection of wide span lightweight structures The erection equipment is described as well as the lifting and tensioning process and the construction methods used to erect the characteristic types of tensile structures illustrated with a selection of example projects Forward by Werner Sobek

Introduction to Cable Roof Structures Hans Anton Buchholdt, 1999 The second edition of this book provides structural engineers with a concise introduction to the architectural structural and technological aspects of cable roofs and supplies sufficient information for engineers to carry out their own designs The improved methods for generating wind and earthquake histories have been included as the trend in modern design codes seem increasingly to require that dynamic response of other forms of non linear structures such as guyed masts is considered at the design stage

Tubular Structures IX Puthli, 2001-01-01 A reference for architects and engineers this work covers themes on architecture case
