The Elementary Functions An Algorithmic Approach:

The Elementary Functions G. Albert Higgins, 1973 Elementary Functions: an Algorithmic Approach Theodore C. Burrowes, Sharon K. Burrowes, Sharon Yoder, 1974 **Algorithms for Computer Algebra** Keith O. Geddes, Stephen R. Czapor, George Labahn, 2007-06-30 Algorithms for Computer Algebra is the first comprehensive textbook to be published on the topic of computational symbolic mathematics The book first develops the foundational material from modern algebra that is required for subsequent topics It then presents a thorough development of modern computational algorithms for such problems as multivariate polynomial arithmetic and greatest common divisor calculations factorization of multivariate polynomials symbolic solution of linear and polynomial systems of equations and analytic integration of elementary functions Numerous examples are integrated into the text as an aid to understanding the mathematical development The algorithms developed for each topic are presented in a Pascal like computer language An extensive set of exercises is presented at the end of each chapter Algorithms for Computer Algebra is suitable for use as a textbook for a course on algebraic algorithms at the third year fourth year or graduate level Although the mathematical development uses concepts from modern algebra the book is self contained in the sense that a one term undergraduate course introducing students to rings and fields is the only prerequisite assumed The book also serves well as a supplementary textbook for a traditional modern algebra course by presenting concrete applications to motivate the understanding of the theory of rings and fields *Elementary Functions* Jean-Michel Muller, 2005-10-24 Second Edition of successful well reviewed Birkhauser book which sold 866 copies in North America Provides an up to date presentation by including new results examples and problems throughout the text The second edition adds a chapter on multiple precision arithmetic and new algorithms invented since 1997 *Course and Curriculum Improvement Materials* National Science Foundation (U.S.), 1976 *Handbook of Signal Processing Systems* Shuvra S. Bhattacharyya, Ed F. Deprettere, Rainer Leupers, Jarmo Takala, 2018-10-13 In this new edition of the Handbook of Signal Processing Systems many of the chapters from the previous editions have been updated and several new chapters have been added The new contributions include chapters on signal processing methods for light field displays throughput analysis of dataflow graphs modeling for reconfigurable signal processing systems fast Fourier transform architectures deep neural networks programmable architectures for histogram of oriented gradients processing high dynamic range video coding system on chip architectures for data analytics analysis of finite word length effects in fixed point systems and models of architecture There are more than 700 tables and illustrations in this edition over 300 are in color This new edition of the handbook is organized in three parts Part I motivates representative applications that drive and apply state of the art methods for design and implementation of signal processing systems Part II discusses architectures for implementing these applications and Part III focuses on compilers as well as models of computation and their associated design tools and methodologies **Introduction to Maple** Andre HECK, 2011-06-27 The first two editions of this book have been very well

received by the community but so many revisions of the Maple system have occurred since then that simply reprinting the out of stock book would not do anymore. A major revision of the book was inevitable too. The wording major revision must be taken seriously because I not only corrected typographical errors, rephrased text fragments and updated many examples but I also rewrote complete chapters and added new material. In particular the chapter on differential equations now discusses Lie symmetry methods, partial differential equations and numerical methods. Linear algebra is based throughout the book on the packages `LinearAlgebra` and `VectorCalculus` which replace the deprecated package `linalg`. Maple users are strongly advised to do their work with the new packages. The chapter on simplification has been updated and expanded; it discusses the use of assumptions in more detail now. Last but not least a new chapter on Gröbner basis theory and the `Groebner` package in Maple has been added to the book. It includes many applications of Gröbner basis theory. Many of the Maple sessions have been rewritten so that they comply with the most recent version of Maple. As a result of all this work hardly any section in the book has been left untouched. vi Preface to the Third Edition

From the Preface of the Second Edition: The first edition of this book has been very well received by the community.

Computer Algebra in Quantum Field Theory
 Carsten Schneider, Johannes Blümlein, 2013-10-05

The book focuses on advanced computer algebra methods and special functions that have striking applications in the context of quantum field theory. It presents the state of the art and new methods for infinite multiple sums, multiple integrals, in particular Feynman integrals, difference and differential equations in the format of survey articles. The presented techniques emerge from interdisciplinary fields: mathematics, computer science and theoretical physics. The articles are written by mathematicians and physicists with the goal that both groups can learn from the other field, including most recent developments. Besides that, the collection of articles also serves as an up-to-date handbook of available algorithms, software that are commonly used or might be useful in the fields of mathematics, physics or other sciences.

Computer Algebra Handbook Johannes Grabmeier, Erich Kaltofen, Volker Weispfenning, 2012-12-06

Two ideas lie gleaming on the jeweler's velvet. The first is the calculus, the second the algorithm. The calculus and the rich body of mathematical analysis to which it gave rise made modern science possible, but it has been the algorithm that has made possible the modern world. David Berlinski, *The Advent of the Algorithm*. First there was the concept of integers; then there were symbols for integers: I, II, III, 1, 11, 111, fttt, what might be called a sticks and stones representation; I, II, III, IV, V, Roman numerals; 1, 2, 3, 4, 5, Arabic numerals, etc. Then there were other concepts with symbols for them and algorithms, sometimes for manipulating the new symbols. Then came collections of mathematical knowledge, tables of mathematical computations, theorems, general results. Soon after, algorithms came, devices that provided assistance for carrying out computations. Then mathematical knowledge was organized and structured into several related concepts and symbols: logic, algebra, analysis, topology, algebraic geometry, number theory, combinatorics, etc. This organization and abstraction led to new algorithms and new fields like universal algebra. But always our symbol systems reflected and influenced our thinking, our concepts and our

algorithms *Hypergeometric Summation* Wolfram Koepf, 2014-06-10 Modern algorithmic techniques for summation most of which were introduced in the 1990s are developed here and carefully implemented in the computer algebra system Maple™ The algorithms of Fasenmyer Gosper Zeilberger Petkov ek and van Hoeij for hypergeometric summation and recurrence equations efficient multivariate summation as well as q analogues of the above algorithms are covered Similar algorithms concerning differential equations are considered An equivalent theory of hyperexponential integration due to Almkvist and Zeilberger completes the book The combination of these results gives orthogonal polynomials and hypergeometric and q hypergeometric special functions a solid algorithmic foundation Hence many examples from this very active field are given The materials covered are suitable for an introductory course on algorithmic summation and will appeal to students and researchers alike
