Values George Crawford, 2014-01-09 The principal's value system should guide every decision that is made in the school. This book shows that the ways in which school leaders influence student achievement are guided by their philosophical and cultural beliefs and their value systems.

Science, Technology, Policy and International Law Justo Corti Varela, Paolo Davide Farah, 2024-10-02 This book presents innovative insights into the intersections between science, technology, and society and particularly their regulation by the law. Departing from the idea that law and science have similar methods and objectives, the book deals with problems and solutions that source from these interactions: concerns on how to integrate scientific evidence into trials, how to best regulate new technologies, or whether technological innovations could improve democratic legitimacy, create new regulatory tools, or even new spaces of regulation, and what is the impact on the society. The edited collection, by building on a functionalist and comparatist approach, offers answers to how to best integrate law, science, and technology in policy making and reviews the current attempts made at the transnational and international levels. Case studies ranging from emerging technologies via environmental protection to statistics are complemented by a solid theoretical framework, all of which seek to provide readers with tools for critical thinking in the reassessment of the relationship among theory, practice, political goals, and international regulation.
