Development Klaus Libertus, Petra Hauf, 2017-05-18 Motor skills are a vital part of healthy development and are featured prominently both in physical examinations and in parents baby diaries It has been known for a long time that motor development is critical for children's understanding of the physical and social world Learning occurs through dynamic interactions and exchanges with the physical and the social world and consequently movements of eyes and head arms and legs and the entire body are a critical during learning At birth we start with relatively poorly developed motor skills but soon gain eye and head control learn to reach grasp sit and eventually to crawl and walk on our own The opportunities arising from each of these motor milestones are profound and open new and exciting possibilities for exploration and interactions

and learning. Consequently, several theoretical accounts of child development suggest that growth in cognitive, social, and perceptual domains are influenced by infants' own motor experiences. Recently, empirical studies have started to unravel the direct impact that motor skills may have on other domains of development. This volume is part of this renewed interest and includes reviews of previous findings and recent empirical evidence for associations between the motor domain and other domains from leading researchers in the field of child development. We hope that these articles will stimulate further research on this interesting question.

Sandberg, Linda Rouleau, Ann Langley, Haridimos Tsoukas, 2017-07-04 One of the most intriguing questions since the time of Plato concerns what defines skillful performance in terms of specific capabilities knowledge competence and expertise As Frederick Taylor famously noted an answer to that question would enable us to know what to focus on and what to do to improve the performance of individuals groups and organizations Although we have come to know a great deal about the properties of capabilities knowledge competence and expertise at large we know significantly less about how they are enacted in skillful performance Thus how skillful performance draws on knowledge how skills develop and how competencies

and capabilities are put to action are still eluding us Process thinking has not sufficiently explored skillful performance This book aims to address this gap It brings together scholars from different backgrounds traditions and disciplines whose common perspective is distinctly process oriented They seek to rethink capabilities knowledge competence and expertise not as if these phenomena were already accomplished but on the contrary as processes in the making as performative accomplishments Such rethinking opens up several new conversations and extends the range of inquiry about how capabilities knowledge competence and expertise are accomplished in practice and consequently how they may be improved
