Elliptic cylinder and spheroidal wave functions, including tables of separation constants and coefficients, by J.A.Stratton Julius Adams Stratton, *Suprematism in Harmonic Analysis* Antonio Córdoba, 2024-11-08

This award winning monograph explores advanced topics in harmonic analysis addressing both classical and contemporary problems Several connections to number theory crystallography or atomic theory are also surveyed The term suprematism refers to a certain geometric point of view underlying proofs and arguments The opening of the book is dedicated to a few results with short statements and proofs that could be called mathematical haikus Then in the first part of the book singular integrals beyond the classical Calderón Zygmund theory such as Vitali type covering lemmas and estimates for the corresponding maximal operators are explored The exponential overlapping of parallelepipeds the strong maximal function and Zygmund's conjecture about monotonic bases are also covered The core of this part is devoted to the Kakeya maximal function and its relation to the spherical summation of Fourier series and integrals The two dimensional case is well understood but the case of higher dimensions still presents many open problems and conjectures The chapters in the second part of the book treat questions at the interface of harmonic analysis and number theory including applications of the Poisson summation formula to crystallography and arithmetic estimates of the Minkowski dimension of Riemann graphs random lattice point problems and the role of Weyl sums in atomic energy oscillations With a focus on rigorous research insights for graduate students and researchers in mathematics this book provides a comprehensive journey through the hidden landscapes of harmonic analysis
