Spin Excitations In Nuclei:

Spin Excitations in Nuclei Fred Petrovich, 2012-12-06 This volume contains the proceedings of the International Conference on Spin Excitations in Nuclei held in Telluride Colorado March 25-27 1982 The motivation for the conference was in a large part due to the recent development of new variable energy accelerators which produce high quality beams of electrons protons and pions that are providing the first precise information on spin excitations in nuclei over a large range of spin and mass In the past such data had been restricted primarily to light nuclei and were generally resolution limited Perhaps the most exciting new result has been the clear observation of the elusive spin dipole strength Gamow Teller and M1 in medium and heavy mass nuclei through the use of the p n and p p reactions at or near zero degrees with 100-200 MeV incident protons Energy dependence in the isovector parts of the nucleon-nucleon interaction make the 100-200 MeV energy region particularly appropriate for such studies The clean data from e e IT IT p p and p n on high spin stretched states which have particularly simple structure has also been quite important The recent results contain important new information on the nature of the spin dependent forces in nuclei These in turn are inherently related to the properties of the nuclear mesonic field and the underlying quantum chromodynamics

Spins in Nuclear and Hadronic Reactions Hiroyuki Yabu, Toru Suzuki, H.

Toki, 2000 Spin physics is one of the most important and active areas of theoretical experimental nuclear physics In nuclear reactions the observations of spin polarizations give important clues to the nuclear structures and reaction mechanism For high energy nuclear physics the polarized quark parton distributions of the nucleon nucleus are studied intensively In the study of baryon structures and nuclear astrophysics spin is an important observable through hadron reactions The focus of these proceedings is on the spin dependent phenomena in nuclear and hadronic reactions and related topics in nuclear and hadron physics The main subjects covered are Spin polarization phenomena in nuclear and hadronic reactions spin dependent excitations in nuclei and spin observables recent development in nuclear reaction theories spin dependent phenomena in fundamental processes related topics

Nuclear Physics - Proceedings Of The Conference M K Pal, B B Baliga, J N De, K Kar, D Bhaumik, 1992-12-10 This volume gives

a detailed account of the current trends in the interface areas of medium and high energy nuclear physics Special stress is given to topics like chiral models relativistic models hot nuclei quark gluon plasma and other reactions with non nucleonic degrees of freedom The articles present the state of the art research in these areas and also suggest unsolved problems which will form the main thrust of future research work in nuclear physics

Exotic Nuclear Excitations S.C.

Pancholi, 2011-03-23 By providing the reader with a foundational background in high spin nuclear structure physics and

exploring exciting current discoveries in the field this book presents new phenomena in a clear and compelling way The quest for achieving the highest spin states has resulted in some remarkable successes which this monograph will address in comprehensive detail The text covers an array of pertinent subject matter including the rotational alignment and bandcrossings magnetic rotation triaxial strong deformation and wobbling motion and chirality in nuclei This book offers a clearly written and up to date treatment of the topics covered The prerequisites for a proper appreciation are courses in nuclear physics and nuclear models and measurement techniques of observables like gamma ray energies intensities multi fold coincidences angular correlations or distributions linear polarization internal conversion coefficients short lifetime pico second range of excited states etc and instrumentation and data analysis methods

New Vistas in Electro-Nuclear Physics Edward L. Tomusiak, Henry S. Caplan, Edward T. Dressler, 2013-11-11 The NATO Advanced Study Institute New Vistas in Electro Nuclear Physics was held in Banff Alberta Canada from August 22 to September 4 1985 This volume contains the lecture notes from that Institute The idea to organize this Institute coincided with the award of funding for a pulse stretcher ring at the University of Saskatchewan s Linear Accelerator Laboratory This together with the high level of interest in electron accelerators worldwide convinced us that it was an appropriate time to discuss the physics to be learned with such machines In particular that physics which requires high energy and or high duty cycle accelerators for its extraction was intended to be the focus of the Institute Thus the scope of the lectures was wide with topics ranging from the structure of the trinucleons to quark models of nucleons QCD and QHD The theme however was that we are just trying to understand the nucleus and that the electromagnetic probe can serve as a powerful tool in such a quest
