Spoken Dialogue With Computers:

Spoken Dialogue Technology Michael F. McTear, 2004-09-09 Spoken Dialogue Technology provides extensive coverage of spoken dialogue systems ranging from the theoretical underpinnings of the study of dialogue through to a detailed look at a number of well established methods and tools for developing spoken dialogue systems The book enables students and practitioners to design and test dialogue systems using several available development environments and languages including the CSLU toolkit VoiceXML SALT and XHTML voice This practical orientation is usually available otherwise only in reference manuals supplied with software development kits The latest research in spoken dialogue systems is presented along with extensive coverage of the most relevant theoretical issues and a critical evaluation of current research prototypes A dedicated web site containing supplementary materials code links to resources will enable readers to develop and test their own systems Previously such materials have been difficult to track down available only on a range of disparate web sites and this web site provides a unique and useful reference source which will prove invaluable

Spoken Dialogue Systems

Kristina Jokinen, Michael McTear, 2022-05-31 Considerable progress has been made in recent years in the development of dialogue systems that support robust and efficient human machine interaction using spoken language Spoken dialogue technology allows various interactive applications to be built and used for practical purposes and research focuses on issues that aim to increase the system's communicative competence by including aspects of error correction cooperation multimodality and adaptation in context This book gives a comprehensive view of state of the art techniques that are used to build spoken dialogue systems It provides an overview of the basic issues such as system architectures various dialogue management methods system evaluation and also surveys advanced topics concerning extensions of the basic model to more conversational setups The goal of the book is to provide an introduction to the methods problems and solutions that are used in dialogue system development and evaluation It presents dialogue modelling and system development issues relevant in both academic and industrial environments and also discusses requirements and challenges for advanced interaction management and future research Table of Contents Preface Introduction to Spoken Dialogue Systems Dialogue Management Error Handling Case Studies Advanced Approaches to Dialogue Management Advanced Issues Methodologies and Practices of Evaluation Future Directions References Author Biographies

Spoken Multimodal Human-Computer Dialogue in Mobile Environments Wolfgang Minker, Dirk Bühler, Laila Dybkjær, 2005-08-17 This book is based on publications from the ISCA Tutorial and Research Workshop on Multi Modal Dialogue in Mobile Environments held at Kloster Irsee Germany in 2002 The workshop covered various aspects of development and evaluation of spoken multimodal dialogue systems and components with particular emphasis on mobile environments and discussed the state the art within this area On the development side the major aspects addressed include speech recognition dialogue management multimodal output generation system architectures full applications and user interface issues On the evaluation side primarily usability evaluation was addressed A number of

high quality papers from the workshop were selected to form the basis of this book. The volume is divided into three major parts which group together the overall aspects covered by the workshop. The selected papers have all been tended, reviewed and improved after the workshop to form the backbone of the book. In addition, we have supplemented each of the three parts by an invited contribution intended to serve as an overview chapter.

Spoken Dialogue With Computers Bianca Angelini, 1998-04-21. Spoken Dialogues with Computers gives a complete state of the art description of all the components of a computer based spoken dialogue system. Experts review the complete chain in detail from microphone to speech synthesis. The book will be invaluable to researchers in industry and academia working on speech communication systems and for application developers in industry.

Situated Dialog in Speech-Based Human-Computer Interaction Alexander Rudnicky, Antoine Raux, Ian Lane, Teruhisa Misu, 2016-04-20. This book provides a survey of the state of the art in the practical implementation of Spoken Dialog Systems for applications in everyday settings. It includes contributions on key topics in situated dialog interaction from a number of leading researchers and offers a broad spectrum of perspectives on research and development in the area. In particular, it presents applications in robotics, knowledge access and communication and covers the following topics: dialog for interacting with robots, language understanding and generation, dialog architectures and modeling, core technologies and the analysis of human discourse and interaction. The contributions are adapted and expanded contributions from the 2014 International Workshop on Spoken Dialog Systems (IWSDS 2014) where researchers and developers from industry and academia alike met to discuss and compare their implementation experiences, analyses and empirical findings.

Handling Emotions in Human-Computer Dialogues Johannes Pittermann, Angela Pittermann, Wolfgang Minker, 2009-10-28. In this book, a novel approach that combines speech based emotion recognition with adaptive human computer dialogue modeling is described. With the robust recognition of emotions from speech signals as their goal, the authors analyze the effectiveness of using a plain emotion recognizer, a speech emotion recognizer combining speech and emotion recognition, and multiple speech emotion recognizers at the same time. The semi stochastic dialogue model employed relates user emotion management to the corresponding dialogue interaction history and allows the device to adapt itself to the context including altering the stylistic realization of its speech. This comprehensive volume begins by introducing spoken language dialogue systems and providing an overview of human emotions, theories, categorization and emotional speech. It moves on to cover the adaptive semi stochastic dialogue model and the basic concepts of speech emotion recognition. Finally, the authors show how speech emotion recognizers can be optimized and how an adaptive dialogue manager can be implemented. The book, with its novel methods to perform robust speech based emotion recognition at low complexity, will be of interest to a variety of readers involved in human computer interaction.

Human-computer Interaction, INTERACT '99 Martina Angela Sasse, Chris W. Johnson, 1999. This text provides an overview of leading edge developments in the field of human computer interaction. It includes contributions from many key areas that are influencing

the use of computers Sections include speech technology interaction with mobile and hand held computers e business web based systems virtual reality and haptic interfaces

Speech, Image, and Language Processing for Human Computer Interaction: Multi-Modal Advancements Tiwary, Uma Shanker, Siddiqui, Tanveer J., 2012-04-30 This book identifies the emerging research areas in Human Computer Interaction and discusses the current state of the art in these areas Provided by publisher

HUMAN-COMPUTER INTERACTION MEENA, K., SIVAKUMAR, R., 2014-11-27 Human Computer Interaction HCI is the current challenging issue of research and information technology The areas of recent research like Usability Engineering Cognitive Architectures Spoken Dialogue System and Recommender Systems are covered in the book Besides the new dimensions of HCI such as Ontological Engineering Ambient Intelligence and Ubiquitous Computing are also introduced Design methodologies of Spoken Dialogue System and the corresponding mathematic models are also presented whereas the main emphasis is given on the simple presentation and making the cognition process easier for the learners The book is an invaluable tool for the undergraduate and postgraduate students of computer science and engineering and information technology In addition it is of immense value for the postgraduate students of computer application Besides researchers will be benefitted from Chapter 3 Modelling of Understanding Process and Chapter 5 Recommender Systems as these are based on the review of cognitive architectures and ontological tools Software engineers will find the book useful especially for the contents of Chapter 2 Usability Engineering Technology innovators will appreciate Chapter 7 Ambient Intelligence The New Dimension of Human Computer Interaction which discusses advanced technologies such as Ambient Intelligence Middleware Technologies and Ubiquitous Computing Information specialists and web designers will have an interesting experience with Chapter 6 Advanced Visualisation Methods that deals with advanced visualisation techniques
