Molecular Microbial Ecology Manual Antoon D. L. Akkermans, Jan Dirk Van Elsas, Frans J. De Bruijn, 2014-01-13 For a long time microbial ecology has been developed as a distinct field within Ecology In spite of the important role of microorganisms in the environment this group of invisible organisms remained unaccessible to other ecologists Detection and identification of microorganisms remain largely dependent on isolation techniques and characterisation of pure cultures We now realise that only a minor fraction of the microbial community can be cultivated As a result of the introduction of molecular methods microbes can now be detected and identified at the DNA RNA level in their natural environment This has opened a new field in ecology Molecular Microbial Ecology In the present manual we aim to introduce the microbial ecologist to a selected number of current molecular techniques that are relevant in microbial ecology The first edition of the manual contains 33 chapters and an equal number of additional chapters will be added this year Since the field of molecular ecology is in a continuous progress we aim to update and extend the Manual regularly and will invite anyone to deposit their new protocols in full detail in the next edition of this Manual We hope this book finds its place where it was born at the lab bench Antoon D L Akkermans Jan Dirk van Elsas and Frans J de Bruijn March 1995

A Biologist's Guide to Mathematical Modeling in Ecology and Evolution Sarah P. Otto, Troy Day, 2007-03-12 Thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling Not so today In seeking to answer fundamental questions about how biological systems function and change over time the modern biologist is as likely to rely on sophisticated mathematical and computer based models as traditional fieldwork In this book Sarah Otto and Troy

Day provide biology students with the tools necessary to both interpret models and to build their own The book starts at an elementary level of mathematical modeling assuming that the reader has had high school mathematics and first year calculus Otto and Day then gradually build in depth and complexity from classic models in ecology and evolution to more intricate class structured and probabilistic models The authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory Through examples they describe how models have been used to understand such topics as the spread of HIV chaos the age structure of a country speciation and extinction Ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power and limits of biological models and to develop theories and models themselves This innovative book will be an indispensable guide to the world of mathematical models for the next generation of biologists A how to guide for developing new mathematical models in biology Provides step by step recipes for constructing and analyzing models Interesting biological applications Explores classical models in ecology and evolution Questions at the end of every chapter Primers cover important mathematical topics Exercises with answers Appendixes summarize useful rules Labs and advanced material available

Ecology of a Tool Pierre Perequin, Anne-Marie Petrequin, 2020-04-30 New Guinea and especially Papua New Guinea is the last country in the world where ethnologists were able to closely observe film and photograph the whole manufacturing chain of polished stone felling tools from quarry extraction to finished tool use Research on the polished blades of PNG has evolved over the years following changing philosophies and research agendas While it is clear that an exceptional sum of information has been gathered it remains centered on that small part of the Highlands where conditions for field research were more pleasant than elsewhere This presentation of Irian Jaya axes therefore tackles a topic that remains mostly unexplored Until now stone tool research in New Guinea has followed an anthropocentric approach in which tools are seen more as vectors for social exchanges than as means of acting on the environment This monograph takes a different approach Here polished stone blades are placed at the center

of the world between on one side the transformed natural environment and on the other the social and economic environment This approach allows for a suggestion of new avenues of inference in archaeology as well as to test and abandon existing ones In this volume the stone blade is considered as a living being existing in balance within its biotope This idea is not far removed from the beliefs of Irian Jaya farmers for whom life animates certain objects of their material culture Following a brief presentation of Irian Jaya the function of polished stone blades in Irian Jaya societies and the distribution of hafting styles is described defined and studied along with the quarrying zones and the areas of diffusion and use of their production The different trends in each area of polished blade production and exchanges are also noted Finally it concludes with a discussion of the ethnoarchaeological potential of these contemporary observations *Ecology, Ethics, and Interdependence* Dunne D. Teske, Geng Qin, Olivia Roth, Emily Rose, 2023-11-27 Syngnathids are a large and diverse group of fishes including seahorses pipefishes seadragons and pipehorses These iconic and vulnerable fishes are distributed worldwide in warm temperate to tropical environments usually in coastal shallow water Most species are marine and strongly associated with vegetal communities or coral reefs which provide shelter and the necessary dietary resources Syngnathids have a unique reproductive mode with parental care diverse brooding structures and other special characteristics that make them highly vulnerable These iconic fishes are facing several threats namely environmental disturbances and habitat regression However many of their biological ecological and physiological characteristics have been poorly investigated and limited to a few species Despite their vulnerability to date a large number of species are listed as Data Deficient meaning they could potentially be threatened by IUCN due to inadequate or insufficient information mainly on distribution and or population status Due to the progressive regression of wild populations long term monitoring programs are necessary to evaluate population dynamics fisheries and habitat quality On the other hand these charismatic fishes especially seahorses are excellent flagship species for marine biodiversity conservation Unfortunately illegal harvesting and traffic of seahorses and other syngnathids is a fact despite CITES controls Hence the development of new tools for fish traceability and updated policies are also necessary to reduce the threats to these fishes **Spatial Ecology and Conservation Modeling** Robert Fletcher, Marie-Josée Fortin, 2019-02-15 This book provides a foundation for modern applied ecology Much of current ecology research and conservation addresses problems across landscapes and regions focusing on spatial patterns and processes This book is aimed at teaching fundamental concepts and focuses on learning by doing through the use of examples with the software R It is intended to provide an entry level easily accessible foundation for students and practitioners interested in spatial ecology and conservation Urban Bird Ecology and Conservation Christopher A.
