Gottlieb, Janice E. Williams, 2013-11-11 Child adolescent development and behavior have been a traditional concern of primary health care providers However it was not until the mid 1960s that attempts were made to consolidate developmental behavioral issues into an identifiably distinct fund of medical knowledge During the ensuing two decades developmental behavioral pediatrics was recognized as a clinical and research subspecialty within the framework of comprehensive health care for children The influence of public advocacy groups topic dedicated journals national professional specialty societies subject related continuing education programs and federal legislation PL94 142 has served to crystallize developmental behavioral pediatrics as a specialized field of study As a consequence during the past ten years significant modifications have restructured medical student and pediatric resident education providing an emphasis on developmental behavioral issues The focus on neurodevelopmental educational and psychosocial issues reflects changing priorities in traditional health care for children The postgraduate training of pediatric fellows in two and three year training programs was initiated to accommodate professional manpower needs in both academic and practice settings Many of the problems in childhood development and behavior frequently span the traditional areas of child neurology child psychiatry and general pediatrics As a result there has been some confusion in demarcating professional responsibilities in diagnosis and management as well as poorly defined terminology and classification schemas With the birth of developmental pediatrics as a pediatric specialty a more cohesive fund of knowledge has been accumulated and more meaningful strategies have been designed for prevention diagnosis and management *Being Gifted in School* Laurence J. Crane, 2025-02-13 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence. It is free to read on Oxford Academic and offered as a free PDF download from OUP and selected open access locations. The idea that a child is intellectually gifted has a social and cultural history. This book analyses that social history at multiple scales and makes the voices of the gifted young themselves central through examination of their poetry, letters and life writing. In daily encounters, those labelled gifted sometimes loved this label and felt special in comparison to peers at school and siblings at home. For others, gifted was a silly or embarrassing label and many questioned the idea of separating off young people in terms of intelligence as well as the specific forms of testing being used. Ideas of the gifted child also reshaped family lives: parents dedicated time to providing special leisure spaces for those thought of as gifted, running them in their own homes and taking their children significant distances to spend time with others that were also gifted. Voluntary organisations were critical here as the network through which young people and adults encountered the term gifted and lived and created it relationally through interactions with one another. Voluntary organisations looking to gain attention and visibility also critically shaped the idea that the gifted young were elites of the future, central to answering challenges of economic decline, global warfare or humanitarian aid. The hopes placed on gifted children between the 1960s and the 1990s were often sky high, yet many gifted young still felt that the community wasted their talents and did not support them. This book then provides new perspectives on the tensions between elitism and equality in modern Britain. It also offers vivid stories of optimism, hope, disappointment and criticism in which young people themselves play a central role.
