semantics while building graph traversal queries Get up and running with advanced Cypher concepts like List Maps
 OPTIONAL MATCH Master best practices in writing effective queries leveraging data modeling and patterns Book
 Description While it is easy to learn and understand the Cypher declarative language for querying graph databases it can be
 very difficult to master it As graph databases are becoming more mainstream there is a dearth of content and guidance for
 developers to leverage database capabilities fully This book fills the information gap by describing graph traversal patterns in
 a simple and readable way This book provides a guided tour of Cypher from understanding the syntax building a graph data
 model and loading the data into graphs to building queries and profiling the queries for best performance It introduces APOC
 utilities that can augment Cypher queries to build complex queries You ll also be introduced to visualization tools such as
 Bloom to get the most out of the graph when presenting the results to the end users After having worked through this book
 you ll have become a seasoned Cypher query developer with a good understanding of the query language and how to use it
 for the best performance What you will learn Write Cypher queries from basic to advanced level Map the source data to the
 graph data model in an iterative fashion Load the data into a graph using LOAD CSV APOC and client drivers Map the
 business questions to graph queries effectively Identify query performance issues and fix them Extend capabilities of Cypher
 using APOC utilities Work with graph visualization tools like Bloom and Browser Who this book is for This book is targeted at
 Database Administrator Database Developers Graph Database Developers and Graph Database Architects This book will also
 help someone migrate from a DBA role to a graph data engineer or data scientist If you are working with graph databases
 and need to learn Cypher or are a basic Cypher developer who wants to get better at data modeling and tuning queries to
 build performant Cypher queries then this is the book for you *Simulation of Industrial Systems* David Elizandro, Hamdy

Traffic Grooming in Optical WDM Mesh

Networks Keyao Zhu, Hongyue Zhu, Biswanath Mukherjee, 2006-03-30 Optical networks based on wavelength division multiplexing WDM technology offer the promise to satisfy the bandwidth requirements of the Internet infrastructure and provide a scalable solution to support the bandwidth needs of future applications in the local and wide areas In a wavelength routed network an optical channel referred to as a lightpath is set up between two network nodes for communication Using WDM technology an optical fiber link can support multiple non overlapping wavelength channels each of which can be operated at the data rate of 10 Gbps or 40 Gbps today On the other hand only a fraction of customers are expected to have a need for such a high bandwidth Due to the large cost of the optical backbone infrastructure and enormous WDM channel capacity connection requests with diverse low speed bandwidth requirements need to be efficiently groomed onto high capacity wavelength channels This book investigates the optimized design provisioning and performance analysis of traffic groomable WDM networks and proposes and evaluates new WDM network architectures Organization of the Book Significant amount of research effort has been devoted to traffic grooming in SONET WDM ring networks since the current telecom networks are mainly deployed in the form of ring topologies or interconnected rings As the long haul backbone networks are evolving to irregular mesh topologies traffic grooming in optical WDM mesh networks becomes an extremely important and practical research topic for both industry and academia
