The Ecology Of Neotropical Savannas:

The Ecology of Neotropical Savannas Guillermo Sarmiento, 1984 Integrated view of the genesis of grasslands of the New World tropics especially those of Venezuela Ecosystem Function in Savannas Michael J. Hill, Niall P. Hanan, 2010-11-17 Fascinating and diverse savanna ecosystems support a combination of pastoral and agropastoral communities alongside wild and domestic herbivores that can be found nowhere else This diversity has made the study of these areas problematic Ecosystem Function in Savannas Measurement and Modeling at Landscape to Global Scales addresses some of the d *Fire in Tropical Savannas* Alan N. Andersen, Garry D. Cook, Richard J. Williams, 2006-05-17 Fire is a major agent of disturbance in many biomes of the world but is a particularly important feature of tropical savannas Up to 50% of the extensive tropical savanna landscapes of northern Australia are burnt each year This includes prestigious conservation reserves such as World Heritage listed Kakadu National Park in the Top End of the Northern Territory As in other savanna regions of the world the responses of biota to different fire regimes are poorly understood such that fire management represents one of the greatest challenges to conservation managers and researchers alike This is the context within which a landscape scale fire experiment was established at Kapalga Research Station in Kakadu which aimed to provide a sound scientific basis for conservation management in the region The experiment was established by The Australian Commonwealth Scientific and Industrial Research Organization CSIRO but involved collaborators from a range of universities and government agencies including the managers of Kakadu the Australian Nature Conservation Agency ANCA now Parks Australia North This book summarizes the findings from the Kapalga fire experiment and explores the implications for conservation management We believe that Kapalga has provided important insights into the fire ecology of tropical savannas and has broad relevance for the conservation management of fire-prone landscapes in general This book should be of interest to researchers graduate students and land management agencies vii viii Preface We are extremely grateful to all our collaborators both inside and outside CSIRO for their involvement in the Kapalga experiment **The ^AOxford**

Companion to Global Change Andrew Goudie, David Cuff, 2008-11-21 The Oxford Companion to Global Change is a fresh look at the world and the compelling environmental issues of the early 21st century including global warming and its technical and regional implications as well as the prospects for current energy supplies and the promise of new technologies In one convenient volume it brings together current knowledge about the relations between technological social demographic economic and political factors as well as biological chemical and physical systems It is an essential reference work for law and policy practitioners researchers and other professionals seeking to understand any aspect of global change

Biodiversity and Savanna Ecosystem Processes Otto T. Solbrig, Ernesto Medina, Juan F. Silva, 2013-03-07 Savannas are the most widespread ecosystem in the tropics and as such are subjected to great human pressure that may result in massive soil degradation The book addresses the role of species in the function of savanna ecosystems It is shown that

savannas are enormously diverse and that four factors determine the function of savanna ecosystems Plant Available Moisture Plant Available Nutrients Fire Herbivores *The SAGE Handbook of Biogeography* Andrew Millington, Mark Blumler, Udo Schickhoff, 2011-09-22 A superb resource for understanding the diversity of the modern discipline of biogeography and its history and future especially within geography departments I expect to refer to it often Professor Sally Horn University of Tennessee As you browse through this fine book you will be struck by the diverse topics that biogeographers investigate and the many research methods they use Biogeography is interdisciplinary and a commonly voiced concern is that one biogeographer may not readily understand another's research findings A handbook like this is important for synthesising situating explaining and evaluating a large literature and pointing the reader to informative publications Geographical Research A valuable contribution in both a research and teaching context If you are biologically trained it provides an extensive look into the geographical tradition of biogeography covering some topics that may be less familiar to those with an evolution ecology background Alternatively if you are a geography student researcher or lecturer it will provide a useful reference and will be invaluable to the non biogeographer who suddenly has the teaching of an introductory biogeography course thrust upon them Adam C Algar *Frontiers of Biogeography* The SAGE Handbook of Biogeography is a manual for scoping the past present and future of biogeography that enable readers to consider where relevant how similar biogeographical issues are tackled by researchers in different schools In line with the concept of all SAGE Handbooks this is a retrospective and prospective overview of biogeography that will Consider the main areas of biogeography researched by geographers Detail a global perspective by incorporating the work of different schools of biogeographers Explore the divergent evolution of biogeography as a discipline and consider how this diversity can be harnessed Examine the interdisciplinary debates that biogeographers are contributing to within geography and the biological sciences Aimed at an international audience of research students academics researchers and practitioners in biogeography the text will attract interest from environmental scientists ecologists biologists and geographers alike **Lamto** Luc Abbadie, Jaques Gignoux, Xavier Roux, Michel Lepage, 2006-11-22 Known as a dream place for scientists the Lamto savannas located on the edge of the Cote d'Ivoire rain forests are some of the only savannas in the world where ongoing ecological research has endured for over forty years Drawing from and synthesizing this abundance of research the book examines the structure function and dynamics of the Lamto humid savanna Beginning with the history of the Lamto ecology station proceeding on to an overview of the major environmental conditions of the site and specifically examining the integrative view of energy and nutrient fluxes relative to the dynamics of the region's vegetation this exacting work is as unique and treasured as Lamto itself **Savannas** Peter A. Furley, 2016 Due to pressures on land for development savannas are at the forefront of research and conservation concerns Here Peter A Furley describes the range of ecosystems encompassed in the savanna landscape their rich wildlife their impact on humans and their evolution and the approaches to their conservation

and management *Biodiversity and Ecosystem Function* Ernst-Detlef Schulze, Harold A. Mooney, 2012-12-06 The biota of the earth is being altered at an unprecedented rate We are witnessing wholesale exchanges of organisms among geographic areas that were once totally biologically isolated We are seeing massive changes in landscape use that are creating even more abundant successional patches reductions in population sizes and in the worst cases losses of species There are many reasons for concern about these trends One is that we unfortunately do not know in detail the consequences of these massive alterations in terms of how the biosphere as a whole operates or even for that matter the functioning of localized ecosystems We do know that the biosphere interacts strongly with the atmospheric composition contributing to potential climate change We also know that changes in vegetative cover greatly influence the hydrology and biochemistry of a site or region Our knowledge is weak in important details however How are the many services that ecosystems provide to humanity altered by modifications of ecosystem composition Stated in another way what is the role of individual species in ecosystem function We are observing the selective as well as wholesale alteration in the composition of ecosystems Do these alterations matter in respect to how ecosystems operate and provide services This book represents the initial probing of this central question It will be followed by other volumes in this series examining in depth the functional role of biodiversity in various ecosystems of the world *Savanna Woody Plants and Large Herbivores* Peter Frank Scogings, Mahesh

Sankaran, 2019-07-25 Insights on current research and recent developments in understanding global savanna systems Increasingly recognized as synonymous with tropical grassy biomes savannas are found in tropical and sub tropical climates as well as warm temperate regions of North America *Savanna Woody Plants and Large Herbivores* examines the interactions between woody plants and browsing mammals in global savannas focusing primarily on the C4 grassy ecosystems with woody components that constitute the majority of global savannas and discusses contemporary savanna management models and applications This much needed addition to current research examines topics including the varying behavior of browsing mammals the response to browsing by woody species and the factors that inhibit forage intake Contributions from an international team of active researchers and experts compare and contrast different savanna ecosystems offering a global perspective on savanna functioning the roles of soil and climate in resource availability and organism interaction and the possible impacts of climate change across global savannas Fills a gap in literature on savanna management issues including biodiversity conservation and animal production Applies concepts developed in other biomes to future savanna research Complements contemporary books on savanna or large herbivore ecology Focuses on the woody component of savanna ecosystems and large herbivore interactions in savannas Compares tree mammal systems of savannas and other ecosystems of temperate and boreal regions Provides numerous case studies of plant mammal interactions from various savanna ecosystems *Savanna Woody Plants and Large Herbivores* is a valuable addition to those in fields such as ecology wildlife and conservation biology natural resource management and environmental science
