The Elusive City Five Centuries Of Design Ambition And Miscalculation:

The Elusive City Jonathan Barnett, 1987 *Housing the North American City* Michael Doucet, John C. Weaver, 1991-08-06

Doucet and Weaver begin this empirical analytical and narrative study with an analysis of the evolution of land development as an enterprise and continue with an examination of house design and construction practices the development of the apartment building and an account of class and age as they relate to housing tenure They also relate developments in Hamilton to the current state of urban historiography using their case study to resolve discrepancies and contradictions in the literature Among the major themes the authors deal with is a controversial exploration of what they see as a central North American urge the desire to own a home Other themes include the social allocation of urban space the quality and affordability of housing the increased interest of large corporations in the land development and financial service industries and a comparative analysis of housing in Canada and the United States The authors have drawn on civic and business records dating from the early nineteenth century to the latest planning data Combining this information with their comprehensive analysis Doucet and Weaver show that current housing problems and potential solutions are better understood when seen as part of a historical process They provide a critical assessment of the ways in which contemporary society produces shelter and question the use of technical innovations alone to resolve housing crises

The Routledge Companion to Twentieth and Early Twenty-First Century Urban Design Jon Lang, 2020-11-09 The Routledge Companion to Twentieth and Early Twenty First Century Urban Design is a fully illustrated descriptive and explanatory history of the development of urban design ideas and paradigms of the past 150 years The ideas and projects hypothetical and built range in scale from the city to the urban

block level The focus is on where the generic ideas originated the projects that were designed following their precepts the functions they address and or afford and what we can learn from them The morphology of a city its built environment evolves unselfconsciously as private and governmental investors self consciously erect buildings and infrastructure in a pragmatic piecemeal manner to meet their own ends Philosophers novelists architects and social scientists have produced myriad ideas about the nature of the built environment that they consider to be superior to those forms resulting from a laissez faire attitude to urban development Rationalist theorists dream of ideal futures based on assumptions about what is good empiricists draw inspirations from what they perceive to be working well in existing situations Both groups have presented their advocacies in manifestoes and often in the form of generic solutions or illustrative designs This book traces the history of these ideas and will become a standard reference for scholars and students interested in the history of urban spaces including architects planners urban historians urban geographers and urban morphologists
