Roberts,2018-10-05 Strategic Thinking and Planning Second Edition is volume four in the Museum Trustee Association s Templates for Trustees series The book and customizable web based templates feature tools that help boards to consider their options identify their priorities and plan their actions at this critical moment in a museum s life cycle In addition to the manual and on line website purchasers have access to the ongoing assistance of MTA staff This book and the accompanying templates models the kind of thinking that is required not only to create a strategic plan that is tailored to each institution but also to stay focused on the strategic aspects of governance while implementing that plan Planning teams are introduced to exercises and tools that will help them focus on what s most important to the future of their institution In using the templates they will adopt new ways of analyzing information and thinking about their museum s mission that will make them more effective leaders *Strategic Thinking Illustrated* Dennis Sherwood,2022-10-14 This book is about the behaviour of systems Systems are important for we interact with them all the time and many of the actions we take are influenced by a system for example the system of performance measures in an organisation influences often very strongly how individuals within that organisation behave Furthermore sometimes we are involved in the design of systems as is any manager contributing to the definition of what those performance measures might be That manager will want to ensure that all the proposed performance measures will drive the right behaviours rather than inadvertently encouraging dysfunctional game playing and so anticipating how the performance measurement system will work in practice is a vital part of a wise design process Some of the systems with which we interact are local such as your organisation s performance measurement system Some systems however are distant but nonetheless very real such as the healthcare system the education system the legal system and the climate system Systems therefore exist on all scales from the local to the global And all systems are complex some hugely so That s why understanding how systems behave can be very helpful Systems are complex for two main reasons First the manner in which they behave over time can be very hard to anticipate and anticipating the future sensibly is of course a key objective of management Second

the entities within a system can be connected together in very complex ways so that an intervention here can result in an effect there perhaps a long time afterward Sometimes this can be surprising and so we talk of unintended consequences but this is of course a euphemism for because I didn't understand how this system behaves I had not anticipated that Systems thinking the subject matter of this book is the disciplined study of systems and causal loop diagrams the pictures of this picture book are a very insightful way to represent the connectedness of the entities from which any system is composed so taming that system's complexity
