P. Copestake,M.A. Partington,2023-07-26 Sequence stratigraphy has become a powerful tool in the basin analysis of the North Sea Basin and will continue to play an important role in the maximization of the remaining hydrocarbon potential of the region whilst also supporting the energy transition in carbon capture and storage projects with Jurassic storage units This Memoir provides a long awaited comprehensive documentation of Jurassic to lowermost Cretaceous sequence stratigraphy of the region UK Norway Denmark and adjacent areas The volume is amply illustrated by numerous well log displays core images seismic lines chronostratigraphic diagrams and outcrop photographs Individual chapters discuss the historical usage of sequence stratigraphy in the North Sea Jurassic sequence stratigraphic concepts and models application in hydrocarbon field development definition of stratigraphic traps well sequence interpretation methodology and controls on sequence development To complete the volume there are further chapters on North Sea Jurassic lithostratigraphy and its relation to sequence stratigraphy and descriptions of the biozones used to characterize and correlate the sequences

Reijers,2012-12-06 **Petroleum Geochemistry in Exploration of the Norwegian Shelf** Norwegian Petroleum Society,2012-12-06 This volume is the record of a three day symposium entitled Organic Geochemistry in Exploration of the Norwegian Shelf which was sponsored by the Norwegian Petroleum Society Norsk Petroleumsforening and held at the Rogalands Regional College Stavanger on 22-24 October 1984 Twenty nine papers were presented and all but one are published in full herein The aim of the conference was to focus on the application of geochemical methods to the current and highly active exploration of the Norwegian offshore Emphasis was on practical interpretation and case histories rather than laboratory methods and techniques and a strong attendance was sought among geologists and seismic interpreters active in exploration in Norway and Northwest Europe generally On all counts the symposium was a great success with a total of 213 participants registered In his opening address Mr Egil Bergsager director of the Norwegian Petroleum Directorate observed that during the 1970s petroleum geochemistry emerged from being a somewhat academic pursuit into a practical aid in exploration for hydrocarbons This first stage when many of the basic methods were developed has now led in the 1980s to an expansion into applications in regional geological studies including mathematical modelling of thermal history hydrocarbon migration and basin development **Sedimentary Environments Offshore Norway-Palaeozoic to Recent** O.J.

Martinsen,T. Dreyer,2001-06-06 Required reading for geologists working in the offshore areas Volume 10 continues the series from the Norwegian Petroleum Society This work provides an up to date review of the late Palaeozoic to present

sedimentary history of the Norwegian offshore areas in the North Sea and Mid Norway basins Case studies overview articles and analogue examples from adjacent areas such as Greenland and Denmark present new ideas on the development of the Norwegian margin from the Carboniferous through the Mesozoic and Cenozoic In particular new evidence and interpretations are presented on well known major reservoir bearing successions such as the Statfjord Formation and Dunlin Group in the Northern North Sea and the re and the Tilje Formations in the Mid Norway area Furthermore the Upper Jurassic succession in the Haltenbanken area is described giving new evidence on the interplay between extensional tectonics and sedimentation during the second major rift phase in the area The Cretaceous and Cenozoic periods are treated extensively showing their importance as overall deep water sedimentary systems with proven and potential reservoir rocks such as in the Ormen Lange Field and for causing burial of Jurassic rocks to advantageous depths for hydrocarbon generation The Recent sedimentary history of the Norwegian margin is treated with examples of the glacial history and giant submarine slides which understanding is vital for the placement of offshore installations The book is organised based on geologic time from Palaeozoic through Mesozoic to Cenozoic examples It includes a set of palaeogeographic maps from the Carboniferous through to the Cenozoic In addition there are numerous examples of core photographs well log data correlation panels and seismic as well as outcrop photographs and logs from the analogue examples Comprehensive reference and keyword lists are also included

The Jurassic of Denmark and Greenland Jon R. Ineson, Finn Surlyk, 2003

The Jurassic of Denmark and adjacent areas occurs mostly in the subsurface and research has thus focussed on the wealth of borehole and reflection seismic data resulting from over thirty years of hydrocarbon exploration The Jurassic of East Greenland in contrast is exposed in spectacular cliffs along fjords and mountainsides and has come to be regarded as a unique field laboratory particularly amongst those working on the Norwegian shelf the conjugate margin of East Greenland This bulletin presents the results of a period of intensive research into the Jurassic in the late 1980s and 1990s Following detailed chronostratigraphic and biostratigraphic reviews of the Jurassic of Northwest Europe the successions of Denmark and East Greenland are subjected to a range of stratigraphic sedimentological structural and geochemical studies that together provide the basis for a detailed comparison of the Jurassic evolution of the East Greenland and Danish sedimentary basins
