Strawberry History Breeding Physiology:

The Strawberry George McMillan Darrow,1999 The Strawberry George McMillan Darrow,1966 The book develops in precise terms the genetic structure cross breedings and varieties of the numerous strawberry species Large portions of this volume are devoted to detailed accounts of the experimental work on the strawberry in all parts of the world The numerous contributors and their contributions to the development of the plant are fully discussed BOOKJACKET The Strawberry; History, Breeding, and Physiology, by George M. Darrow George McMillan Darrow,1966 **Plant Breeding Reviews, Volume 21** Jules Janick,2001-10-04 Plant Breeding Reviews is an ongoing series presenting state of the art review articles on research in plant genetics especially the breeding of commercially important crops Articles perform the valuable function of collecting comparing and contrasting the primary journal literature in order to form an overview of the topic This detailed analysis bridges the gap between the specialized researcher and the broader community of plant scientists

Mansfeld's Encyclopedia of Agricultural and Horticultural Crops R. Büttner,2001-04-10 With contributions by numerous experts **Hybrid** Noel Kingsbury,2009-10-15 Disheartened by the shrink wrapped Styrofoam packed state of contemporary supermarket fruits and vegetables many shoppers hark back to a more innocent time to visions of succulent red tomatoes plucked straight from the vine gleaming orange carrots pulled from loamy brown soil swirling heads of green lettuce basking in the sun With Hybrid Noel Kingsbury reveals that even those imaginary perfect foods are themselves far from anything that could properly be called natural rather they represent the end of a millennia long history of selective breeding and hybridization Starting his story at the birth of agriculture Kingsbury traces the history of human attempts to make plants more reliable productive and nutritious a story that owes as much to accident and error as to innovation and experiment Drawing on historical and scientific accounts as well as a rich trove of anecdotes Kingsbury shows how scientists amateur breeders and countless anonymous farmers and gardeners slowly caused the evolutionary pressures of nature to be supplanted by those of human needs and thus led us from sparse wild grasses to succulent corn cobs and from mealy white wild carrots to the juicy vegetables we enjoy today At the same time Kingsbury reminds us that contemporary controversies over the Green Revolution and genetically modified crops are not new plant breeding has always had a political dimension A powerful reminder of the complicated and ever evolving relationship between humans and the natural world Hybrid will give readers a thoughtful new perspective on and a renewed appreciation of the cereal crops vegetables fruits and flowers that are central to our way of life *Breeding for Fruit Quality* Matthew A. Jenks, Penelope Bebeli,2011-01-21 The global demand for high quality fruits that are rich in nutrients and that can endure the demands of worldwide supply chains is growing rapidly Fruits are an important component of the human diet providing vitamins minerals antioxidants and fiber All of these qualities contribute to the nutritional needs and health maintenance of humans Breeding for Fruit Quality reviews the application of modern plant breeding methods to the development of improved varieties of fruits Breeding for Fruit Quality

opens with chapters that look at fruit biology and breeding strategies behind specific traits including a look at traits such as organoleptic quality nutritional value and improved yield among others Subsequent chapters review breeding efforts to improve overall quality in a wide range of specific fruits Providing broad ranging coverage of cutting edge methods now being applied to the development of fruit crops Breeding for Fruit Quality will be a valuable resource for fruit biologists breeders geneticists and industry personnel Key Features Broad coverage of modern breeding technologies being implemented to improve overall fruit quality Trait specific chapters explore efforts to promote traits of industrial and nutritional importance Chapters in fruits ranging from apple and grapes to tomatoes and olives provide detailed coverage of breeding practices for economically important fruit crops

Strawberries, 2nd Edition James F. Hancock, 2020-09-21 This new and updated edition of a popular text provides a broad balanced review of the scientific knowledge of strawberries and their cultivation The worldwide strawberry industry has grown substantially since the original book was published and methods of culture have undergone extensive modifications This volume incorporates important changes to the taxonomy of strawberries and new understanding of how its ancestors evolved It includes coverage of new disease and pest control methods and recent developments in genomic information These advancements have greatly improved our understanding of how flowering and fruiting is regulated and will revolutionize the breeding of strawberries

The Genomes of Rosaceous Berries and Their Wild Relatives Timo Hytönen, Julie Graham, Richard Harrison, 2018-06-08 This book collates the most up to date information on *Fragaria* and *Rubus* genomes It focuses on the latest advances in the model system *Fragaria vesca* along with the allied advances in economically important crops Covering both basic and applied aspects of crop genomics it illustrates strategies and resources for the study and utilization of genome sequences and aligned functional genomics resources Rosaceous berries are collectively an increasingly important set of high value global crops with a trade value of over 2 billion dollars per annum The rosaceous berries strawberry raspberry and blackberry share some common features at the genome scale namely a range of ploidy levels in each genus and high levels of heterozygosity and associated inbreeding depression due to self incompatibility systems dioecy or multispecies hybridization events Taken together although the genomes are relatively compact these biological features lead to significant challenges in the assembly and analysis of berry genomes which until very recently have hampered the progress of genome level studies The genome of the woodland strawberry *Fragaria vesca* a self compatible species with a homozygous genome was first sequenced in 2011 and has served as a foundation for most genomics work in *Fragaria* and to some extent *Rubus* Since that time building upon this resource there have been significant advances in the development of genome sequences for related crop species This coupled with the revolution in affordable sequencing technology has led to a suite of genomics studies on *Fragaria* and more recently *Rubus* which undoubtedly aid crop breeding and production in future years

Evaluation of Quality of Fruits and Vegetables Harold E. Pattee, 2014-11-14 Acceptance or rejection of any edible commodity whether it is raw or processed is usually

conditioned by sensory stimuli The impact of these stimuli on the decision making process is broadly termed sensory evaluation Advances in sensory evaluation research have been slow in the past because of the human factor the necessity to use highly trained sensory panels to conduct this research High technology instrumentation and new understandings of sensory evaluations are now combining to make possible quantum jumps forward in sensory evaluation research It is widely recognized that the sensory aspects of fruits and vegetables are affected by many factors among them environment variety cultural practices and handling practices However if one attempts to find a general reference or compilation of findings regarding this subject area there seems to be few if any available A survey of the literature does suggest that in the past few years research into specific factors which influence the sensory aspects of fruits and vegetables has increased significantly This increased interest in sensory research and the renewed national awareness of the value of research into pre and postharvest quality of fruits and vegetables prompted the Flavor Subdivision Agricultural and Food Chemistry Division American Chemical Society to sponsor a symposium entitled Sensory Evaluation of Fruits and Vegetables Effect of Environment Cultural Practices and Variety during the 1982 meeting in Kansas City Missouri
