Handbook of Child Psychopathology Thomas H. Ollendick, 2013-11-11 In our

first edition of the Handbook in 1983 we noted that child psychopathology should no longer be viewed simply as a downward extension of adult psychopathology. Rather we suggested that children must be viewed as children not as miniature adults and that a merger of clinical child psychology and developmental psychology must occur in order for this objective to be realized. Now 6 years later we are sufficiently encouraged to assert that this synthesis at least on a conceptual level is well under way. Yet much growth remains to be seen along practical lines. The real test of the synthesis of these two fields of study will be evidenced on the battlefield that is the front line of clinical practice. Just how integrated clinical child psychology and developmental psychology really are remains to be seen. Nonetheless progress is well under way. Careful attention to developmental and other contextual issues guided us in our efforts to solicit contributors for this second edition. All the contributors are active researchers and clinicians in the area of child psychopathology and all are keenly aware of the subtleties and special considerations of clinical and developmental psychology as they relate to child behavior problems. In addition all the contributors are empirically minded as a result the chapters are data based and represent some of the most up to date knowledge currently available. However as research based knowledge is more abundant and conclusive in some topic areas than in others the chapters vary in length and scope.

Handbook of Military Psychology Reuven Gal, A. David Mangelsdorff, 1991

The military must evaluate large numbers of people, screen out the unfit, select individuals with needed abilities and place people in the jobs most appropriate both to their skills and to military needs. Military personnel of all sorts must be trained and prepared for warfare. Individuals have to be led and motivated and units must maintain high morale and cohesion in order to achieve their missions. Furthermore military missions are frequently carried out under most stressful conditions and usually require strenuous adjustment between human capabilities and weapon systems peculiarities. These characteristics of military organization all have their psychological aspects. This comprehensive handbook will be an essential tool for military psychologists, trainers and leaders dealing with these aspects. It will also be of interest to both practitioners and researchers working in the field of occupational and industrial psychology and for those working in personnel management.
