Use of the Normalized Difference Vegetation Index (NDVI) to Assess Land Degradation at Multiple Scales

Genesis T. Yengoh, David Dent, Lennart Olsson, Anna E. Tengberg, Compton J. Tucker III, 2015-11-11 This report examines the scientific basis for the use of remotely sensed data particularly Normalized Difference Vegetation Index NDVI primarily for the assessment of land degradation at different scales and for a range of applications including resilience of agro ecosystems Evidence is drawn from a wide range of investigations primarily from the scientific peer reviewed literature but also non journal sources The literature review has been corroborated by interviews with leading specialists in the field The report reviews the use of NDVI for a range of themes related to land degradation including land cover change drought monitoring and early warning systems desertification processes greening trends soil erosion and salinization vegetation burning and recovery after fire biodiversity loss and soil carbon This SpringerBrief also discusses the limits of the use of NDVI for land degradation assessment and potential for future directions of use A substantial body of peer reviewed research lends unequivocal support for the use of coarse resolution time series of NDVI data for studying vegetation dynamics at global continental and sub continental levels There is compelling evidence that these data are highly correlated with biophysically meaningful vegetation characteristics such as photosynthetic capacity and primary production that are closely related to land degradation and to agroecosystem resilience Toxicology and Human Environments Ernest Hodgson, 2012-09-28

Environmental toxicology is generally held to be the study of the potential of constituents of outdoor environments to impact either human health or the biological structure of the ecosystems involved This volume is a first attempt to integrate toxicological studies of all of the many human environments both indoor and outdoor and their complex interrelationships Included are considerations of natural environments the agroecosystem occupational urban and domestic environments as well as the environment associated with Superfund sites and military deployments The primary emphasis is on public health including the potential health effects of toxicants found in different environments the bioprocessing of such toxicants in humans and surrogate animals and the principles of risk analysis Approaches the toxicology of human environments in a new and unique way stressing the complex interrelationships of all human environments and the implication for human and environmental health Each chapter is written by an acknowledged expert and is addressed to those interested in the broader implications of the environmental modifications that are always associated with the activities of humans living and working in them Nature and Culture Sarah Pilgrim, Jules N. Pretty, 2010-09-23 There is a growing recognition that the diversity of life comprises both biological and cultural diversity But this division is not universal and in many cases has been deepened by the common disciplinary divide between the natural and social sciences and our apparent need to manage and control nature This book goes beyond divisive definitions and investigates the bridges linking biological and cultural diversity The international team of authors explore the common drivers of loss and argue that policy responses should target both forms of

diversity in a novel integrative approach to conservation thus reducing the gap between science policy and practice While conserving nature alongside human cultures presents unique challenges this book forcefully shows that any hope for saving biological diversity is predicated on a concomitant effort to appreciate and protect cultural diversity **Indices** Oak Ridge National Laboratory,1972 **Arctic Report Card 2010** Jacqueline A. Richter-Menge,2011-08 Tracks recent environmental changes throughout the Arctic In 2010 it is clear that the Arctic is experiencing the impacts of a prolonged and amplified warming trend highlighted with many record setting events The impact of this warming is most evident in the dramatic losses that have been observed in the ice covers that define the region Since the loss of these ice covers serves to further feed the warming trend the expectation is that warming will continue This makes it increasingly unlikely that the Arctic will return to conditions that were considered normal in the later part of the 20th cent Instead it is very likely that Arctic climate warming will continue and records will continue to be set in years to come Charts and tables This is a print on demand report

Terrestrial Magnetism and Atmospheric Electricity ,1906 *Terrestrial Ecosystems in a Changing World* Josep G. Canadell,Diane E. Pataki,Louis F. Pitelka,2007-01-10 Over 100 authors present 25 contributions on the impacts of global change on terrestrial ecosystems including key processes of the earth system such as the CO₂ fertilization effect shifts in disturbances and biome distribution the saturation of the terrestrial carbon sink and changes in functional biodiversity ecosystem services such the production of wheat pest control and carbon storage in croplands and sensitive regions in the world threaten by rapid changes in climate and land use such as high latitudes ecosystems tropical forest in Southeast Asia and ecosystems dominated by Monsoon climate The book also explores new research developments on spatial thresholds and nonlinearities the key role of urban development in global biogeochemical processes and the integration of natural and social sciences to address complex problems of the human environment system Biodiversity Monitoring and Conservation Ben Collen,Nathalie Pettorelli,Jonathan E. M. Baillie,Sarah M. Durant,2013-02-14 As the impacts of anthropogenic activities increase in both magnitude and extent biodiversity is coming under increasing pressure Scientists and policy makers are frequently hampered by a lack of information on biological systems particularly information relating to long term trends Such information is crucial to developing an understanding as to how biodiversity may respond to global environmental change Knowledge gaps make it very difficult to develop effective policies and legislation to reduce and reverse biodiversity loss This book explores the gap between global commitments to biodiversity conservation and local action to track biodiversity change and implement conservation action High profile international political commitments to improve biodiversity conservation such as the targets set by the Convention on Biological Diversity require innovative and rapid responses from both science and policy This multi disciplinary perspective highlights barriers to conservation and offers novel solutions to evaluating trends in biodiversity at multiple scales *Land Resources Monitoring, Modeling, and Mapping with Remote Sensing* Ph.D., Prasad S. Thenkabail,2015-10-02 A volume in the three volume Remote Sensing Handbook series Land Resources Monitoring

Modeling and Mapping with Remote Sensing documents the scientific and methodological advances that have taken place during the last 50 years. The other two volumes in the series are Remotely Sensed Data Characterization Classification and Accuracies and Remote Sensing of Water Resources Disasters and Urban Studies. In true handbook style the chapters in the volume have been carefully selected, organized and designed to be self contained so that you can focus on a chapter and read it through without having to be overly dependent on other chapters. This volume provides comprehensive theoretical and practical coverage of remote sensing of land resources that include vegetation and biomass, agricultural croplands, rangelands, phenology and food security, forests, biodiversity, ecology, land use, land cover, carbon and soils. Highlights include Global terrestrial carbon and carbon budgets, Precision farming, Agricultural systems studies and soil studies, Global croplands, agricultural croplands and rangelands, Food security analysis, Biodiversity, Land use and land cover mapping, Measuring photosynthesis from space, Vegetation characterization and above ground biomass measurements and modeling, Hyperspectral remote sensing, Ecological studies, Tropical forest characterization, Habitat mapping and monitoring. In a very practical way the book demonstrates the experience, utility, methods and models used in studying a wide array of land applications. With more than 100 leading global contributors, this book is the most comprehensive documentation of the scientific and methodological advances that have taken place in understanding remote sensing data methods and applications over last 50 years. In a very practical way the book demonstrates the experience, utility, methods and models used in studying a wide array of Land applications.

Global Monitoring Report 2008 World Bank, 2008-04-14. *Global Monitoring Report 2008* the fifth in an annual series is essential reading for those who wish to follow the global development agenda and debate in 2008. The year marks the midpoint toward the 2015 deadline for achieving the Millennium Development Goals (MDGs). It is also an important year to work toward a consensus on how the world is going to respond to the challenge of climate change building on the foundation laid at the Bali climate change conference in December 2007. The report spans this agenda. It provides a comprehensive assessment of progress toward the MDGs and related policies and actions. It addresses the challenge of climate change and environmental sustainability and assesses its implications for development. The report's assessment of MDGs at midpoint presents a mixed picture: one of both significant progress and formidable challenges. The first MDG, reducing extreme poverty by half, is likely to be met at the global level thanks to a remarkable surge in global economic growth over the past decade. But on current trends the human development MDGs are unlikely to be met. Prospects are gravest for the goals of reducing child and maternal mortality but shortfalls are also likely in the primary school completion, nutrition and sanitation MDGs. The potential effects of climate change compound the challenge of achieving the development goals and sustaining progress. The report's messages are clear: urgent action is needed to help the world get back on track to achieve the MDGs and urgent action is also needed to combat climate change that threatens the well being of all countries but particularly of poor countries and poor people. The goals of development and environmental sustainability

are closely related and the paths to those goals have important synergies

Evolution of the Atmosphere, Fire and the Anthropocene Climate Event Horizon Andrew Y. Glikson, 2013-10-08 Unique among all creatures further to the increase in its cranial volume from Australopithecus to Homo sapiens the use of tools and cultural and scientific creativity the genus Homo is distinguished by the mastery of fire which since about two million years ago has become its blueprint Through the Holocene and culminating in the Anthropocene the burning of much of the terrestrial vegetation excavation and combustion of fossil carbon from up to 420 million years old biospheres are leading to a global oxidation event on a geological scale a rise in entropy in nature and the sixth mass extinction of species

Remote Sensing of Water-Related Hazards Ke Zhang, Yang Hong, Amir AghaKouchak, 2022-04-19 Applications of remote sensing technology for monitoring and predicting water related hazards Water related hazards such as floods and droughts have serious impacts on society Their incidence has increased in recent decades a trend set to continue with ongoing climate change Adaptation and mitigation measures require accurate detection monitoring and forecasting much of which comes from remote sensing technologies Remote Sensing of Water Related Hazards takes an interdisciplinary approach presenting recent advances in the available data sensors models and indicators developed for monitoring and prediction Volume highlights include Progress in remote sensing of precipitation storms and tornados Different techniques for flood mapping forecasting and early warning Integrated approach for predicting flood and landslide cascading hazards Satellite monitoring of water cycle variation water scarcity and drought conditions Multi indicator and multi sensor approaches for quantifying drought impacts The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity Its publications disseminate scientific knowledge and provide resources for researchers students and professionals

Use of Landscape Sciences for the Assessment of Environmental Security Irene Petrosillo, Felix Müller, K. Bruce Jones, Giovanni Zurlini, Kinga Krauze, Sergey Victorov, Bai-Lian Li, William G. Kepner, 2007-10-02 This book examines environmental security from the perspective of landscape sciences identifying the forces that threaten environmental security at all levels It stems from the last five years of the Pilot Study Project on Use of Landscape Sciences for Environmental Assessment sponsored by the NATO Committee on the Challenges of Modern Society Readers explore concepts of environmental security from subjective and objective perspectives
