 include covert attacks by state actors state use of proxies independent terrorist and extremist attacks by foreign groups or
 individuals and independent terrorist and extremist attacks by residents of the United States These threats are currently
 limited in scope and frequency but are emerging as potentially significant issues for future U S security In this

comprehensive work Cordesman argues that new threats require new thinking and offers a range of recommendations from expanding the understanding of what constitutes a threat and bolstering Homeland defense measures to bettering resource allocation and improving intelligence gathering and analysis No pattern of actual attacks on U S territory has yet emerged that provides a clear basis for predicting how serious any given form of attack might be in the future what means of attack might be used or how lethal new forms of attack might be As a result there is a major ongoing debate over the seriousness of the threat and how the U S government should react This work is an invaluable contribution to that debate **United States Naval Institute Proceedings** ,2004
