Trusted Computing Bing Xie, Juergen Branke, Masoud Sadjadi, Daqing Zhang, Xingshe Zhou, 2010-10-08 Computing systems including hardware software communication and networks are becoming increasingly large and heterogeneous. In short they have become increasingly complex. Such complexity is getting even more critical with the ubiquitous permeation of embedded devices and other pervasive systems. To cope with the growing and ubiquitous complexity, autonomic computing (AC) focuses on self-manageable computing and communication systems that exhibit self-awareness, self-configuration, self-optimization, self-healing, self-protection, and other self-properties to the maximum extent possible without human intervention or guidance. Organic computing (OC) additionally addresses adaptability, robustness, and controlled emergence, as well as nature-inspired concepts for self-organization. Any autonomic or organic system must be trustworthy to avoid the risk of losing control and retain confidence that the system will not fail. Trust and/or distrust relationships in the Internet and in pervasive infrastructures are key factors to enable dynamic interaction and cooperation of various users, systems, and services. Trusted trustworthy computing (TC) aims at making computing and communication systems, as well as services, available, predictable, traceable, controllable, assessable, sustainable, dependable, persistent, security, privacy, protectable, etc. A series of grand challenges exists to achieve practical autonomic or organic systems with truly trustworthy services. Started in 2005, ATC conferences have been held at Nagasaki, Japan; Vienna, Austria; Three Gorges, China; Hong Kong, China; Oslo, Norway; and Brisbane, Australia. The 2010 proceedings contain the papers presented at the 7th International Conference on Autonomic and Trusted Computing (ATC 2010) held in Xi'an, China, October 26-29, 2010.

The Trouble with Trust Frédérique Six, 2008-01-01 The Trouble with Trust poses the question: if trust is considered to be important for successful cooperation, why don't high trust work relationships predominate? Part of the explanation the author argues is that it is particularly difficult to build and maintain trust in work relations.

Trust in Theological Education Eve Parker, 2022-05-31 As those coming forward for ministerial training change and diversify is the way we learn theology changing too Integrity within our training institutions has often been assumed and granted to white male or those from the middle or upper classes This has come at the expense of the faith truths beliefs and perspectives offered by women people of colour indigenous theologies and the working classes whose testimonies have often been ignored or marginalised by the dominant discourses that have been deemed more trustworthy as a consequence of the way in which imperialism has enabled knowledge and religion to be constructed and controlled Yet theological education also has a potential to challenge these norms It holds the potential to challenge oppressive cultures theologies and pedagogies Relying on feminist black indecent and postcolonial theologies Trust in Theological Education will deconstruct dominant models of theological education by incorporating ethnographic research alongside educational theory liberation theology and radical exegesis It will demonstrate theological education's potential to change and be transformed in order to enable those who have been excluded and marginalised to become speaking subjects and agents for systemic change
