Testicular Tangrams:

Testicular Tangrams F.F.G. Rommerts, K.J. Teerds, 2013-06-29 During the past two decades research on the testis has created a vast number of publications New techniques such as cell and gene cloning germ cell manipulation and transplantation as well as gene expression have surpassed the classical approaches that involved studies on receptor activation and endocrine paracrine and autocrine regulatory mechanisms Due to the expansion of this field of research it has become increasingly difficult to integrate the large number of observations and relate them to the physiology and pathophysiology of the testis More emphasis must therefore be put on the integration of isolated findings and the construction of the total picture In order to stimulate this specific mental activity we have named this book Testicular Tangram We hope that the chapters in this book will be used as pieces of the testicular puzzle and that the reader enjoys composing new shapes The chapters of this book are representative of the plenary lectures presented at the 11th European Workshop on Molecular and Cellular Endocrinology of the Testis held in Doorwerth The Netherlands from April 6-10 2002 Publication of this book has been made possible by the generous support of the Ernst Schering Research Foundation We would also like to thank the distinguished scientists who have provided us with their excellent manuscripts well before the start of the Workshop We acknowledge the help of Dr U F Habenicht Dr M

Regulation of Sertoli Cell and Germ Cell Differentiation R. Brehm, Klaus Steger, 2005-12-12 Unwanted childlessness affects approximately one in six couples worldwide though the exact proportion of the predominant cause of the problem remains controversial according to the World Health Organization WHO in nearly 40% of cases the cause can be attributed to the female in 20% to the male in 25% to both and in 15% the cause remains unknown Based on these figures the incidence of male factor infertility in the general population is approximately 7% The majority of these men approximately 30% experience irreversible idiopathic infertility and cannot father children without some form of medical intervention Male factor infertility in addition may be caused by testicular germ cell cancer which is known to represent the most common cancer among young men aged 15 to 35 years in Western industrialized countries The number of affected men has increased dramatically over the past 50 years There is now growing evidence that human testicular germ cell cancer originates from fetal germ cells exhibiting an aberrant programme of gene expression and tumour progression may be favoured by an aberrant Sertoli cell germ cell communication

The Promises and Challenges of Regenerative Medicine John Morser, S. -I. Nishikawa, 2007-01-19 Presents the advances in stem cell research This book discusses the analysis and use of stem cells in basic biology and their application in clinical practice

Chemokine Roles in Immunoregulation and Disease Philip M. Murphy, Richard Horuk, 2003-10-23 The Ernst Schering Workshop on Chemokine Roles in Immunoregulation and Disease with contributions by leading experts in the field succinctly summarizes cutting edge research in immunology protein chemistry and disease This book gives an up to date overview of important developments in immunology with a concise state of the art review of chemokines It is a time saving

reference for both researchers and students providing fast and easy access to the latest information in this important area of research

Leucocyte Trafficking A. Hamann, Khusru Asadullah, A. Schottelius, 2013-06-29 An essential component of inflammation is the migration of circulating leukocytes from blood into tissues This process is characterized by a multistep paradigm of sequential cell adhesion and activation events that lead to the extravasation of specific leukocyte subsets to different tissues in health and disease The first step of leukocyte extravasation the rolling of leukocytes is primarily mediated by the interactions of selectins and their ligands It has recently become evident that fucosyltransferases are crucial for selectin ligand synthesis inflammation and skin homing This book provides an in depth overview of the mechanisms of leukocyte trafficking and of the molecular mechanisms of selectin selectin ligand interactions and discusses options for pharmacological intervention to treat inflammatory diseases

Neuroinflammation in Stroke Ulrich Dirnagl, Bernd Elger, 2004-01-14 The successful treatment of acute stroke remains one of the major challenges in clinical medicine Over the last decades the understanding of stroke pathophysiology has greatly improved while the therapeutic options in stroke therapy remain very limited Today hyperacute mechanisms of damage such as excitotoxicity can be discriminated from delayed ones such as inflammation and apoptosis Targeting of inflammation has already been successfully applied in various stroke models but translation into a clinically efficacious strategy has not been achieved so far In this book leading experts in basic cerebrovascular research as well as stroke treatment review the current evidence for and against an important role for inflammation in stroke and explore the potential of treating or modulating inflammation in stroke therapy

PET Chemistry P.A. Schubiger, L. Lehmann, M. Friebe, 2007-01-19 Personalized medicine employing patient based tailor made therapeutic drugs is taking over treatment paradigms in a variety of fields in oncology and the central nervous system The success of such therapies is mainly dependent on efficacious therapeutic drugs and a selective imaging probe for identification of potential responders as well as therapy monitoring for an early benefit assessment Molecular imaging MI is based on the selective and specific interaction of a molecular probe with a biological target which is visualized through nuclear magnetic resonance near infrared or other methods Therefore it is the method of choice for patient selection and therapy monitoring as well as for specific endpoint monitoring in modern drug development PET positron emitting tomography a nuclear medical imaging modality is ideally suited to produce three dimensional images of various targets or processes The rapidly increasing demand for highly selective probes for MI strongly pushes the development of new PET tracers and PET chemistry PET chemistry can be defined as the study of positron emitting compounds regarding their synthesis structure composition reactivity nuclear properties and processes and their properties in natural and natural environments In practice PET chemistry is strongly influenced by the unique properties of the radioisotopes used e.g. half life chemical reactivity etc and integrates scientific aspects of nuclear organic inorganic and biochemistry

Biologie und Epidemiologie der Hormonersatztherapie - Biology and Epidemiology of Hormone Replacement Therapy M. A. Lewis, M. Dietel, P. Scriba, W.K. Raff, 2007-05-24 This volume contains

an advanced level discussion on the appropriateness of hormone replacement therapy HRT in modern postmenopausal women on the basis of evidence provided by recent epidemiological studies It addresses all aspects of benefits and risks associated with HRT It focuses however on cancer risk and on risk of breast cancer in particular The book advocates further epidemiological studies which incorporate pathobiological assessments

Systems Biology P. Bringmann, E. Butcher, G. Parry, B. Weiss, 2007-05-26 Systems biology has emerged as a highly interdisciplinary field that has created broad enthusiasm in the scientific community Systems biology is in vogue because of its potential to revolutionize not only biology but also medicine Developments are anticipated that will change how we think about disease and how we approach therapeutic intervention Perhaps the boldest vision of this future is presented by Dr Leroy Hood President of the Institute for Systems Biology in Seattle He has been a protagonist and the main driving force of the underlying concept according to Dr Hood systems biology will make possible a new era of medical care comprising predictive preventive personalized and participatory P4 medicine While this vision appears futuristic it has enticed both academic scientific communities and pharmaceutical industry R D organizations Systems biology ultimately attempts to understand biological systems at the molecular level Examples of such systems are subcellular regulatory circuits with all their components cells organs as well as entire organisms Over the past decade technologies have been developed that enable systems level interrogations e.g. gene expression profiling proteomics and metabolomics to name a few Scientists have used such platforms to accumulate a tremendous amount of data Although we have learned a great deal by collecting such detailed information it seems our understanding has not similarly increased

Small Molecule — Protein Interactions Herbert Waldmann, Marcus Koppitz, 2003-03-07 Based on the international workshop on Small Molecule Protein Interactions held in Berlin April 24-26 2002 researchers from industry and academic laboratories describe novel and efficient ways selecting promising new drug targets and developing small molecule inhibitors against them The structure of the book corresponds to the different aspects of the drug discovery process All chapters are written by leading experts in the field who present and discuss the most recent state of the art tools and techniques for the development of novel drugs The value of the book lies in surveying and summarizing the approaches taken by different companies and institutions giving the reader a balanced view on the use of the latest techniques on the one hand and experience based assistance in selecting appropriate tools for their own work on the other hand

From Morphological Imaging to Molecular Targeting Markus Schwaiger, Ludger Dinkelborg, Hermann Schweinfurth, 2004-06-16 The current progress in molecular medicine allows the identification of a plethora of new and often human specific drug targets An early in vivo validation of specific ligands binding to these targets in humans is needed to assess their potential for targeted imaging and radiotherapy Radiopharmaceuticals are uniquely suitable for such target validation studies The purpose of the Ernst Schering Research Foundation Workshop 48 was to offer a forum for an open exchange on the state of the art in the early development of such radiopharmaceuticals Experts from academia industry and

regulatory authorities provided contributions covering the identification of targets the necessary preclinical studies on the safety of ligands as well as their validation in human clinical trials

Opportunities and Challenges of the Therapies

Targeting CNS Regeneration H.D. Perez,B. Mitrovic,A. Baron Van Evercooren,2005-05-06 Today combined oral contraceptives are the most convenient and accepted way of hormonal contraception Nevertheless there is a constant demand in the medical community and consumer market for innovation additional benefits during use and lower hormonal load despite the high safety profile of available products At the Ernst Schering Research Foundation Workshop 52 new perspectives and mechanisms for tissue selective estrogen free contraception were discussed The aim of the workshop was to bring together experts in the field of molecular and pharmacodynamic action of progestins with clinicians and medical experts to discuss potential medical endpoints physiological reactions and bio marker useful to describe the tissue selectivity and the contraceptive action of new progestins in different target organs A major success factor for the realization of these new concepts is a deeper understanding of local pharmacological responses to progestins in general and to new progestins in particular TOC New Strategies for CNS Repair Heterogeneity of Multiple Sclerosis Implications for Therapy Targeting Regeneration The Neuroprotective Effect of Inflammation Implications for the Therapy of Multiple Sclerosis Fibroblast Growth Factors in Oligodendrocyte Physiology and Myelin Repair White Matter Progenitor Cells Reside in an Oligodendrogenic Niche At the Interface of the Immune System and the Nervous System How Neuroinflammation Modulates the Fate of Neural Progenitors in vivo Remyelination and Restoration of Axonal Function by Glial Cell Transplantation Gene and Stem Cell Therapy for Autoimmune Demyelination Novel Gene Therapeutic Strategies for Neurodegenerative Diseases Measuring Injury and Repair of Myelin and Neurons in Multiple Sclerosis The Role of Polypeptide Growth Factors in Recovery from Stroke New Mechanisms for Tissue-Selective Estrogen-Free Contraception H.B. Croxatto,R.

Schürmann,U. Fuhrmann,I. Schellschmidt,2007-01-19 Combined oral contraceptives are the most convenient and accepted method of hormonal contraception Nevertheless the medical community and consumers constantly demand innovation additional benefits during use and lower hormonal load despite the high safety profile of available products At the Ernst Schering Research Foundation Workshop 52 new perspectives and mechanisms for tissue selective estrogen free contraception were discussed The aim of the workshop was to bring together experts in the field of molecular and pharmacodynamic action of progestins with clinicians and medical experts to discuss potential medical endpoints physiological reactions and bio marker useful describing the tissue selectivity and the contraceptive action of new progestins in different target organs A major factor for successful realization of these new concepts is a deeper understanding of local pharmacological responses to progestins in general and to new progestins in particular The Histone Code and Beyond Shelley L. Berger,O. Nakanishi,Bernhard Haendler,2007-01-19 Methylation of DNA at cytosine residues as well as post translational modifications of histones including phosphorylation acetylation methylation and ubiquitylation contribute to the

epigenetic information carried by chromatin These changes play an important role in the regulation of gene expression by modulating the access of regulatory factors to the DNA The use of a combination of biochemical genetic and structural approaches has allowed demonstration of the role of chromatin structure in transcriptional control The structure of nucleosomes has been elucidated and enzymes involved in DNA or histone modifications have been extensively characterized Since deregulation of epigenetic marks has been reported in many cancers a better understanding of the underlying molecular mechanisms bears the promise that new drug targets may soon be found The newest developments in this quickly developing field are presented in this book

Chemical Genomics Stefan Jaroch,Hilmar Weinmann,2007-05-26 Chemical genomics is a highly interdisciplinary and very exciting field of research both in academics and in the life sciences industry The Ernst Schering Research Foundation Workshop 58 was organized to bring together scientific leaders in the field to discuss the implications of chemical genomics for drug discovery Various aspects of the interface between chemistry and biology are covered in this volume such as chemogenomics efforts in the pharmaceutical industry diversity oriented synthesis chemogenomic approaches to the study of cell function screening technologies and natural products as tools in chemical biology

Appropriate Dose Selection - How to Optimize Clinical Drug Development J. Venitz,W. Sittner,2007-03-06 Optimal dose individualization has become more important in improving clinical efficacy and safety given the variability in drug response e g due to concurrent illnesses or co medications Therefore the role of optimal dose finding in early clinical drug development so as to maximize successful clinical use is emphasized The continued use of biomarkers based on the known pharmacology of the drug and or biology of the underlying disease along with exposure response evaluation throughout all phases of drug development can quantitatively integrate clinical pharmacology knowledge provide early proof of concept and help in rational dose selection and rational drug product labeling for clinical use

Chronic Viral and Inflammatory Cardiomyopathy Heinz-Peter Schultheiss,Joachim-Friedrich Kapp,Georg Grötzbach,2007-01-19 The interconnectedness of genetics and susceptibility to disease viral and non viral inflammation and the role of immunity and the development of autoimmunity is a fascinating and much discussed topic in cardiomyopathy This publication constitutes the outcome of an ESRF meeting held together with the German Research Foundation Clinical researchers immunologists virologists and molecular biologists provide the latest findings in their fields advancing our understanding of what causes chronic viral and inflammatory cardiomyopathy why it affects a subset of individuals while sparing the majority how we can develop better therapies and whether the disease can be prevented Special emphasis is placed on the role of viruses in the aetiology and pathogenesis of cardiomyopathy The editors are convinced that the broad spectrum covered by this state of the art publication will be of exceptional value to its readers
