light food where would we be without these essentials Although we do not rely on fire as much today as in times past nor have as much direct contact with it fire was often crucial to survival when the stories in this collection were first told People often told stories about it what their lives were like without fire how they first acquired it and how it changed their lives This collection of nine traditional tales retold by Jon C Stott draws from eight different countries Learn how Maui stole fire twice New Zealand how Coyote and his friends captured fire United States how Opossum brought fire back to the people Mexico and how Vasilisa used the Baba Yaga s fire Russia The main characters of these stories differ in many aspects Some are well known heroes and some are insignificant members of their groups Some made their quests for fire alone and some worked with others Some were brave and unselfish and some sought personal glory But all knew that fire was essential for their people

Magistrates, Municipal, and Parochial Law ... Great Britain. Courts,1875 **Post-fire Treatment Effectiveness for Hillslope Stabilization** Peter R. Robichaud,1998 This synthesis of post fire treatment effectiveness reviews the past decade of research monitoring and product development related to post fire hillslope emergency stabilization treatments including erosion barriers mulching chemical soil treatments and combinations of these treatments In the past ten years erosion barrier treatments contour felled logs and straw wattles have declined in use and are now rarely applied as a post fire

hillslope treatment In contrast dry mulch treatments agricultural straw wood strands wood shreds etc have quickly gained acceptance as effective though somewhat expensive post fire hillslope stabilization treatments and are frequently recommended when values at risk warrant protection This change has been motivated by research that shows the proportion of exposed mineral soil or conversely the proportion of ground cover to be the primary treatment factor controlling post fire hillslope erosion Erosion barrier treatments provide little ground cover and have been shown to be less effective than mulch especially during short duration high intensity rainfall events In addition innovative options for producing and applying mulch materials have adapted these materials for use on large burned areas that are inaccessible by road Although longer term studies on mulch treatment effectiveness are on going early results and short term studies have shown that dry mulches can be highly effective in reducing post fire runoff and erosion Hydromulches have been used after some fires but they have been less effective than dry mulches in stabilizing burned hillslopes and generally decompose or degrade within a year
