Stream of Consciousness in the Modern Novel Robert Humphrey, Humphrey, Margaret, 1954-01-01 Robert Humphrey seeks to provide a precise understanding of stream of consciousness in literature its purpose its techniques and its significance. Through an examination of the work of James Joyce Virginia Woolf Dorothy Richardson William Faulkner and other contemporaries he points to the various means novelists have used to express the inchoate psychic life of their character. He discusses at length the purpose and usefulness of free association the chief device for depicting and controlling both the movement and the privacy of consciousness. His treatment of what he terms cinematic devices such as montage flash back fade out is particularly illuminating. In his discussion of forms Mr Humphrey analyses the various structural patterns that stream of consciousness writers have used in lieu of conventional plots and shows how they have managed the unities of space and time. This book makes challenging reading for the serious students of literature and should prove especially to writers. Publisher

Pope,2013-11-11 *The Bloomsbury Companion to the Philosophy of Consciousness* Dale Jacquette,2018-01-25 From Descartes and Cartesian mind body dualism in the 17th century though to 21st century concerns about artificial intelligence programming The Bloomsbury Companion to the Philosophy of Consciousness presents a compelling history and up to date overview of this burgeoning subject area Acknowledging that many of the original concepts of consciousness studies are found in writings of past thinkers it begins with introductory overviews to the thought of Descartes through to Kant covering Brentano s restoration of empiricism to philosophical psychology and the major figures of the late 19th and early 20th centuries Russell Wittgenstein Ryle and James These opening chapters on the forces in the history of consciousness lay the groundwork needed to understand how influential contemporary thinkers in the philosophy of mind interpret the concept of consciousness Featuring leading figures in the field Part II discusses current issues in a range of topics progressing from the so called hard problem of understanding the nature of consciousness to the methodology of invoking the possibility of philosophical zombies and the prospects of reductivism in philosophy of mind Part III is dedicated to new research directions in the philosophy of consciousness including chapters on experiment objections to functionalism and the scope and limits of artificial intelligence Equipped with practical research resources including an annotated bibliography a research guide and a glossary The Bloomsbury Companion to the Philosophy of Consciousness is an authoritative guide for studying the past present and future of consciousness Stream of Consciousness in the Modern Novel Robert Humphrey (Lecturer in Louisiana State University.),1954 **The Phenomenology of Pain** Saulius Geniusas,2022-08-30 The Phenomenology of Pain is the first book length investigation of its topic to appear in English Groundbreaking systematic and illuminating it opens a dialogue between phenomenology and such disciplines as cognitive science and cultural anthropology to argue that science alone cannot clarify the nature of pain experience without incorporating a phenomenological approach Building on this premise Saulius Geniusas develops a novel conception of pain grounded in phenomenological principles pain is an aversive bodily feeling with a distinct experiential quality which can only be given in original first hand experience either as a feeling sensation or as an emotion Geniusas crystallizes the fundamental methodological principles that underlie phenomenological research On the basis of those principles he offers a phenomenological clarification of the fundamental structures of pain experience and contests the common conflation of phenomenology with introspectionism Geniusas analyzes numerous pain dissociation syndromes brings into focus the de personalizing and re personalizing nature of chronic pain experience and demonstrates what role somatization and psychologization play in pain experience In the process he advances Husserlian phenomenology in a direction that is not explicitly worked out in Husserl s own writings **Library of Congress Subject Headings** Library of Congress,2009 The Conscious Stream Denise Ingebo-Barth,2000-12-01 The Conscious Stream describes a theory built on the idea that consciousness a stream of separate conscious instants like frames making up a reel of film is formed as trajectories circulate around the nervous system circuitry In this model a trajectory is a

series of neuron groups energized in turn Picture it as a sequence of lights flashing around a marquee or perhaps as a comet blazing through a linked series of packed neuron groups through circuits of the nervous system When a trajectory passes through the thalamus a central area of the brain an instant of experience is inserted into our lifelong conscious stream This instant of experience can be a sensation thought or feeling The particular instant depends on the source of the trajectory When a trajectory is initiated by sound waves to the ear and passes through the thalamus for example a sensation in this case a sound enters the conscious stream As the description of this model progresses we see how a trajectory from the thalamus to the cortex is recorded and becomes a part of a network of records and how when concurrent trajectories in the cortical network converge and generate a trajectory back to the thalamus a thought enters the conscious stream In addition as trajectories evolve being repeated prolonged released or compounded emotional feelings enter the conscious stream Over time patterns of invigoration and relaxation stagnation and relief are generated forming our life s emotional quality Finally the model shows how links of activity form a cycle and how a pattern of cycles forms an activity Patterns of activities in turn form a lifestyle In this model then the character of circulation in the nervous system reflects emotional fitness Although designed primarily for students of neuroscience this proposed model may also be evaluated by those having an interest in the physical processes underlying emotional fitness
