Streb Fractures:

Rock Fracture, 1971 **Creep, Viscoelasticity, and Creep Fracture in Solids** John Gittus, 1975 **Fracture of Rock**, 1965 *Physical Fitness/sports Medicine*, 1993 Consists of citations selected from those contained in the National Library of Medicine's Medical Literature Analysis and Retrieval System **The Materiality and Spatiality of Death, Burial and Commemoration** Christoph Klaus Streb, Thomas Kolnberger, 2021-09-28 Death dying and burial produce artefacts and occur in spatial contexts The interplay between such materiality and the bereaved who commemorate the dead yields interpretations and creates meanings that can change over time Materiality is more than simple matter void of meaning or relevance The apparent inanimate has meaning It is charged with significance has symbolic and interpretative value perhaps a form of selfhood which originates from the interaction with the animate In our case gravestones bodily remains and the spatial order of the cemetery are explored for their material agency and relational constellations with human perceptions and actions Consciously and unconsciously by interacting with such materiality one is creating meaning while materiality retroactively provides a form of agency Spatiality provides more than a mere context it permits and shapes such interaction Thus artefacts mementos and memorials are exteriorised materialised and spatialized forms of human activity they can be understood as cultural forms the function of which is to sustain social life However they are also the medium through which values ideas and criteria of social distinction are reproduced legitimised or transformed This book will explore this interplay by going beyond the consideration of simple grave artefacts on the one hand and graveyards as a space on the other hand to examine the specific interrelationships between materiality spatiality the living and the dead The chapters in this book were originally published as a special issue of the journal *Mortality* *Failure Criteria in Fibre-Reinforced-Polymer Composites* M. Hinton, P D Soden, Abdul-Salam Kaddour, 2004-08-27 Fiber reinforced polymer composites are an extremely broad and versatile class of material Their high strength coupled with lightweight leads to their use wherever structural efficiency is at a premium Applications can be found in aircraft process plants sporting goods and military equipment However they are heterogeneous in construction and anisotropic which makes making strength prediction extremely difficult especially compared to that of a metal This book brings together the results of a 12year worldwide failure exercise encompassing 19 theories in a single volume Each contributor describes their own theory and employs it to solve 14 challenging problems The accuracy of predictions and the performance of the theories are assessed and recommendations made on the uses of the theories in engineering design All the necessary information is provided for the methodology to be readily employed for validating and benchmarking new theories as they emerge Brings together 19 failure theories with many application examples Compares the leading failure theories with one another and with experimental data Failure to apply these theories could result in potentially unsafe designs or over design **Digital Performance** Steve Dixon, 2015-01-30 The historical roots key practitioners and artistic theoretical and technological trends in the incorporation

of new media into the performing arts The past decade has seen an extraordinarily intense period of experimentation with computer technology within the performing arts Digital media has been increasingly incorporated into live theater and dance and new forms of interactive performance have emerged in participatory installations on CD ROM and on the Web In Digital Performance Steve Dixon traces the evolution of these practices presents detailed accounts of key practitioners and performances and analyzes the theoretical artistic and technological contexts of this form of new media art Dixon finds precursors to today s digital performances in past forms of theatrical technology that range from the deus ex machina of classical Greek drama to Wagner s Gesamtkunstwerk concept of the total artwork and draws parallels between contemporary work and the theories and practices of Constructivism Dada Surrealism Expressionism Futurism and multimedia pioneers of the twentieth century For a theoretical perspective on digital performance Dixon draws on the work of Philip Auslander Walter Benjamin Roland Barthes Jean Baudrillard and others To document and analyze contemporary digital performance practice Dixon considers changes in the representation of the body space and time He considers virtual bodies avatars and digital doubles as well as performances by artists including Stelarc Robert Lepage Merce Cunningham Laurie Anderson Blast Theory and Eduardo Kac He investigates new media s novel approaches to creating theatrical spectacle including virtual reality and robot performance work telematic performances in which remote locations are linked in real time Webcams and online drama communities and considers the extratemporal illusion created by some technological theater works Finally he defines categories of interactivity from navigational to participatory and collaborative Dixon challenges dominant theoretical approaches to digital performance including what he calls postmodernism s denial of the new and offers a series of boldly original arguments in their place
