Terrestrial Radiative Transfer Harriet H Natsuyama,Sueo Ueno,Alan P Wang,1998-03-01 **Terrestrial Radiative Transfer** Harriet H. Natsuyama,Sueo Ueno,Alan P. Wang,2012-12-06 In this book we share our work with those who are faced with the challenging problem of studying the earth s atmosphere and the interactions between the atmosphere and the earth s surface While there are some excellent books on this topic written from the physical point of view those discussing the modeling and computational aspects are few and far between Our book is intended to bridge this gap so that students as well as investigators will be able to understand and apply practical ways of determining solutions Radiative transfer theory on which this book is based is elegant and great minds have contributed to its richness Instead of duplicating the clas sical references we have taken a different approach We have developed the in variant imbedding approach both analytically and computationally because of its attractiveness for producing numerical solutions Having witnessed the transition to the computer age we know that a new attitude to mathemati cal formulation is required The one that we endorse is a model stated in the form of a Cauchy problem a system of ordinary differential equations with a complete set of initial conditions We chose this approach because it is well suited to implementation on digital computers **Light Scattering Media Optics** Alex A. Kokhanovsky,2004-08-05 The theory of the scattering of light by small particles is very important in a wide range of applications in atmospheric physics and atmospheric optics ocean optics remote sensing astronomy and astrophysics and biological optics This book summarises current knowledge of the optical properties of single small particles and natural light scattering media such as snow clouds foam aerosols etc The book considers both single and multiple light scattering regimes together with light scattering and radiative transfer in close packed media The third edition incorporates new findings in the area of light scattering media optics in an updated version of the text Manual of Geospatial Science and Technology John D. Bossler,John R. Jensen,Robert B. McMaster,Chris Rizos,2001-11-22 Manual of Geospatial Science and Technology shows how to work across the range of geospatial science and technology whether as a user or as a contractor of services employing these technologies and without either specialist education or substantial experience The manual covers the fundamentals providing the requisite mathematics computer science and physics necessary to understand how the technologies work assuming some elementary background in calculus and physics It also shows how the technologies can be used together and focuses on their commonalities A number of applications such as mapping and environmental modeling are presented and a Web site accompanies the book *Leaf Optical Properties* Stéphane Jacquemoud,Susan Ustin,2019-09-05 Presents state of the art research into leaf interactions with light for scientists working in remote sensing plant physiology ecology and resource management *Optics of Light Scattering Media* Alex A.
