Аннотация. В статье рассмотрено развитие теории менеджмента в области управления производством продукции военного назначения. Проанализированы результаты исследований данной проблемы разных авторов. Установлено, что одними из важнейших факторов, определяющих направленность организационного, технологического и экономического развития предприятий в настоящее время являются информационные и телекоммуникационные технологии. Процесс информатизации управления деятельностью предприятий предложено рассматривать как один из важнейших механизмов реформирования оборонной промышленности. Этот механизм должен обеспечить создание эффективных конкурентоспособных форм организации и управления оборонно-промышленным комплексом. Реализовать форсированное внедрение современных информационных и телекоммуникационных технологий в процесс управления производством продукции предложено путем создания в оборонно-промышленном комплексе виртуальных кластеров и обеспечения совместного использования информации предприятиями, входящими в них. Разработана модель виртуального кластера и определен перечень задач, которые необходимо решить для его создания. Реализация указанных результатов исследования на практике будет способствовать повышению эффективности диверсификационной деятельности предприятий оборонно-промышленного комплекса.

Abstract. The article discusses the development of management theory in the field of production management of military products. The results of studies of this problem by different authors are analyzed. It is established that information and telecommunication technologies are one of the most important factors determining the direction of organizational, technological and economic development of enterprises at the present time. The process of informatization of enterprise management is proposed to be considered as one of the most important mechanisms for reforming the defense industry. This mechanism should ensure the creation of effective competitive forms of organization and management of the military-industrial complex. This mechanism should ensure the creation of effective competitive forms of organization and management of the military-industrial complex. It is proposed to implement the accelerated introduction of modern information and telecommunication technologies in the process of managing the diversification of production by creating virtual clusters in the military-industrial complex and ensuring the sharing of information by enterprises that are part of them. A virtual cluster model has been developed and a list of tasks that need to be solved for its creation has been defined. The implementation of these research results in practice will contribute to improving the efficiency of diversification activities of enterprises of the military-industrial complex.

Keywords: management, production, military products, clusters, enterprises.

Введение

Перед российской экономической наукой стоит важнейшая задача – на основе множества различных теоретических положений разработать новый эффективный организационно-экономический механизм управления производством вооружения и военной техники (ВВТ), который должен учитывать задачи диверсификации производства на предприятиях оборонно-промышленного комплекса (ОПК) и специфику их инновационного развития в новых условиях военного строительства [8]. Результаты проводимых ранее исследований этой проблемы, которые отражают междисциплинарность и многовариантность описания процесса управления производством ВВТ, характеризуются фрагментарностью и противоречивостью. Различные теоретические концепции, которые при-

Testing the Theory of the Military-industrial Complex Steven J. Rosen, 1973 **The Uncertainty Doctrine** Alexandra Homolar, 2023-09-14 The post Cold War era is often seen as a missed opportunity of epic proportions for the United States to turn swords into ploughshares with much of the blame placed on international developments The Uncertainty Doctrine challenges the conventional take on post Cold War history as imposed on the US by events largely outside its control It shows in rich empirical detail how America's peace dividend did not merely fall by the wayside but was actively undermined by the narrative contests over the security implications of the New World Order Committed to understanding the ontological significance of narrative in international security Alexandra Homolar demonstrates that political agents have the capacity to respond to a systemic shock through discursive adaptation and reorganization While narrative politics may not always matter in US defense policy at moments perceived as bifurcation points it can be decisive in why some strategic responses prevail over possible alternatives *Disarming Military Industries* Peter Southwood, 1991-06-18 The author notes in the preface that an opportunity for significant cuts in nuclear and conventional forces by major global powers has appeared Presenting the evidence that the West can cope successfully with disarmament he identifies policies which need to be adopted for that end **Israeli Society and Its Defense Establishment** Moshe Lissak, 2013-10-31 First Published in 1984 In this volume the reader will find seven papers which deal with a broad spectrum of issues not necessarily confined to civil military relations in their more limited and narrow definition One will also find reference to the broader issues of the social economic and political impact of the protracted violent conflict on Israeli society The volume focuses more on the consequence of the actual management of the war rather than on the decision making process proper A Guide to the Study and Use of Military History John E. Jessup (Jr.), John E. Jessup, Robert W. State of War Paul A. C. Koistinen,2012-09-16 In his farewell speech President Dwight Eisenhower famously warned us of the dangers of a military industrial complex MIC In Paul Koistinen's sobering new book that warning appears to have been both prophetic and largely ignored As the final volume in his magisterial study of the political economy of American warfare *State of War* describes the bipolar world that developed from the rivalry between the U S and USSR showing how seventy years of defense spending have bred a monster that has sunk its claws into the very fabric of American life Koistinen underscores how during the second half of the twentieth century and well into the twenty first the United States for the first time in its history began

to maintain large military structures during peacetime. Many factors led to that result: the American economy stood practically alone in a war-ravaged world; the federal government, especially executive authority, was at the pinnacle of its powers; the military accumulated unprecedented influence over national security and weaponry became much more sophisticated following World War II. Koistinen describes how the rise of the MIC was preceded by a gradual process of institutional adaptation and then supported and reinforced by the willing participation of Big Science and its industrial partners, the broader academic world, and a proliferation of think tanks. He also evaluates the effects of ongoing defense budgets within the context of the nation's economy since the 1950s. Over time, the MIC effectively blocked efforts to reduce expenditures, control the arms race, improve relations with adversaries, or adopt more enlightened policies toward the developing world, all the while manipulating the public on behalf of national security to sustain the warfare state. Now, twenty years after the Soviet Union's demise, defense budgets are higher than at any time during the Cold War. As Koistinen observes, more than six decades of militaristic mobilization for stabilizing a turbulent world have firmly entrenched the state of war as a state of mind for our nation. Collectively, his five-volume opus provides an unparalleled analysis of the economics of America's wars from the colonial period to the present, illuminating its impact upon the nation's military campaigns, foreign policy, and domestic life.

Neoclassical Realism, the State, and Foreign Policy Steven E. Lobell, Norrin M. Ripsman, Jeffrey W. Taliaferro, 2009-01-15

Neoclassical realism is an important approach to international relations. Focusing on the interaction of the international system and the internal dynamics of states, neoclassical realism seeks to explain the grand strategies of individual states as opposed to recurrent patterns of international outcomes. This book offers the first systematic survey of the neoclassical realist approach. The editors lead a group of senior and emerging scholars in presenting a variety of neoclassical realist approaches to states' grand strategies. They examine the central role of the state and seek to explain why, how, and under what conditions the internal characteristics of states intervene between their leaders' assessments of international threats and opportunities and the actual diplomatic, military, and foreign economic policies those leaders are likely to pursue.
