The Analysis of Categorical Data Using GLIM James K. Lindsey,2012-12-06 The present text is the result of teaching a third year statistical course to undergraduate social science students Besides their previous statistics courses these students have had an introductory course in computer programming FORTRAN Pascal or C and courses in calculus and linear algebra so that they may not be typical students of sociology This course on the analysis of contingency tables has been given with all students in front of computer terminals and more recently micro computers working interactively with GLIM Given the importance of the analysis of categorical data using log linear models within the

overall body of models known as general linear models GLMs treated by GLIM this book should be of interest to anyone in any field concerned with such applications It should be suitable as a manual for applied statistics courses covering this subject I assume that the reader has already a reasonably strong foundation in statistics and specifically in dealing with the log linear logistic models I also assume that he or of GLIM itself In she has access to the GLIM manual and to an operational version other words this book does not pretend to present either a complete introduction to the use of GLIM or an exposition of the statistical properties of log linear logistic models For the former I would recommend Healy 1988 and Aitkin et al 1989 Por the latter many books already exist of which I would especially recommend that of Pingleton 1984 in the present context
