Aural and the University Music Undergraduate Colin R. Wright, 2016-12-14. Research indicates that aural skills are vital in developing musical expertise, yet the precise nature of those skills and the emphasis placed upon them in educational contexts merit closer attention and exploration. This book assesses the relevance of aural in a university music degree and as a preparation for the professional career of a classical musician. By way of the discussion of four empirical studies, two main areas are investigated: firstly, the relationship between university music students' aural ability and their overall success on a music degree programme; and secondly, the views of music students and professional musicians about aural and its relevance to their career are analysed. The subject is investigated particularly in the light of the current socio-educational background of the past fifty years, which has greatly influenced the participation of music and the study and development of musicianship. Many related issues are touched upon as part of the research for this project, and these emerge as relevant topics in the discussion of aural. Apart from students and musicians' views on training and singing, aspects considered include the role of improvisation, memorisation, and notation examinations, absolute pitch, and the affinity with language, all of which have a part to play in the debate about the importance of aural.

21st Century Innovation in Music Education Kun Setyaning Astuti, Gary McPherson, Bambang Sugeng, Nila Kurniasari, Tutut Herawan, Christopher Drake, Ashadi, Endah Retnowati, Adi Cilik Pierewan, 2019-11-27. Music is an expression of feelings of the soul conveyed through the medium of sound. But not all sounds are music. It might be said that only an organised sound or series of sounds can be called music. Thus music is connected to the eternal and constant flow and order of the universe, to the laws and rhythms of nature. It can also be said that musical order is comparable to the natural order of the universe. There are laws of a certain nature in the natural sciences, and likewise in music, there are structures and procedures or even rules that should be followed to produce beautiful music. The International Conference Innovations for 21st Century Music Education and Research provided a timely opportunity to take stock of the latest developments in music education and brought together educators, researchers, and members of the broader community in a welcoming forum in which they were able to express theoretical and practical views, concepts, research results, and principles to help support the further development of music education.
