anthropology by providing researchers with a single source and photographic atlas of what they might encounter in one bone or an entire skeletal collection regardless of antiquity or origin Unlike most texts written by clinicians for clinicians or those that focus on one specialty the Regional Atlas was compiled by biological anthropologists using a dry bones approach and simple yet precise terminology based on examination of nearly 10 000 skeletons The authors expertise and diversity in anatomy radiology pathology and human variation provide them with a unique perspective for distinguishing normal variation from pathological conditions The book was written as a basic stand alone reference for bone disease and normal variation It contains black and white photographs and an extensive use of color plates depicting a variety of disease conditions and stages of progression that one might expect to encounter in one or many skeletons The purpose of this text is to provide readers with sufficient information on bone disease and human variation for them to recognize describe and interpret them Once they have identified a disease normal variant or other condition they can turn to the bibliography for references and additional information The Regional Atlas is intended to provide readers with enough information to do their own skeletal analysis It is this dry bones approach combined with the vast experiences of the authors vivid photos and simple terminology that sets the Regional Atlas apart from all others
