Congress, **Genes, Behavior, and the Social Environment** Institute of Medicine, Board on Health Sciences Policy, Committee on Assessing Interactions Among Social, Behavioral, and Genetic Factors in Health, 2006-12-07 Over the past century we have made great strides in reducing rates of disease and enhancing people's general health. Public health measures such as sanitation, improved hygiene, and vaccines reduced hazards in the workplace. New drugs and clinical procedures and more recently a growing understanding of the human genome have each played a role in extending the duration and raising the quality of human life. But research conducted over the past few decades shows us that this progress, much of which was based on investigating one causative factor at a time, often through a single discipline or by a narrow range of practitioners, can only go so far. **Genes, Behavior, and the Social Environment** examines a number of well-described gene-environment interactions, reviews the state of the science in researching such interactions, and recommends priorities not only for research itself but also for its workforce, resource, and infrastructural needs.
