Slope Geomorphology Critical Concepts In Geography:

Geomorphology David J. A. Evans, 2004-07-15 Geomorphology concerns the forms of the land's surface and the processes that create them. It is an integral part of studies in physical geography and also has significant bearing on geology and engineering. Since the nineteenth century many systems of classifying landforms have been devised and this has led to recognized areas of specialist study, most notably fluvial, slope, coastal, glacial and periglacial, arid lands and landscape evolution. This collection makes available in one place key published material on each of these areas of geomorphology and constitutes an instant archive of essential benchmark papers. By drawing together classic as well as more contemporary material, each volume provides an overview of each field and its development as well as a sense of where current debates are leading. The set as a whole provides representative coverage of the changing perspectives in the study of geomorphology over the past 100 years. The papers have been chosen by specialist editors working with the general editor David J. A. Evans and include introductions to each volume to set the selection in its intellectual and historical context.

Fundamentals of Geomorphology Reader in Geography Richard Huggett, 2007-07 This extensively revised and updated edition continues to present an engaging and comprehensive introduction to the subject, exploring the world's landforms from a broad systems perspective. It reflects on the latest developments in the field and includes new chapters on geomorphic materials and processes, hillslopes and changing landscapes. *Fundamentals of Geomorphology* is an engaging and comprehensive introduction. Starting with a consideration of the nature of geomorphology and the geomorphic system, geomorphic materials and processes, and the quest of process and historical geomorphologists, it moves on to discuss structure landforms resulting from or influenced by the endogenic agencies of tectonic and volcanic processes, geological structures and rock types, process and form landforms resulting from or influenced by the exogenic agencies of weathering, running water, flowing ice and meltwater, ground ice and frost, the wind and the sea, history of the earth's surface, history giving a discussion of Quaternary landforms and ancient landforms including the origin of old plains, relict, exhumed and stagnant landscape features and evolutionary aspects of landscape change. *Fundamentals of Geomorphology* provides a stimulating and innovative perspective on the key topics and debates within the field of geomorphology. Written in an accessible and lively manner, it includes guides to further reading, chapter summaries and an extensive glossary of key terms. The book is also illustrated throughout with over 200 informative diagrams and attractive photographs, including a colour plate section.

Earth Environments David Huddart, Tim A. Stott, 2013-04-16 This book provides a comprehensive coverage of the major topics within undergraduate study programmes in geosciences, environmental science, physical geography, natural hazards and ecology. This text introduces students to the Earth's four key interdependent systems: the atmosphere, lithosphere, hydrosphere and biosphere, focussing on their key components, interactions between them and environmental change. Topics covered include: An earth systems model, components, systems and processes, atmospheric systems, oceanography, endogenic geological systems and

exogenic geological systems biogeography and aspects of the Earth's Record The impact of climate and environmental change is discussed in a final chapter which draws together Earth's systems and their evolution and looks ahead to future earth changes and environments and various time periods in the geological record Throughout the book geological case studies are used in addition to the modern processes

Treatise on Geomorphology, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been

 during the classic period of geomorphology 1890 1950 Volume 4 2008 concentrated on studies of geomorphological
 processes and Quaternary geomorphology between 1890 and 1965 by the end of this period process based studies had
 become dominant Volume 5 builds on this platform covering in detail the revolutionary changes in approach that
 characterized the study of geomorphology in the second half of the twentieth century It is divided into three sections the first
 deals with changes in approach and method the second with changes in ideas and the broader scientific context within which
 geomorphology is studied and the final section details advances in research on processes and landforms The volume s
