Small Parameter Method In Multidimensional Inverse Problems Inverse And Ill-posed Problems Series:

Small Parameter Method in Multidimensional Inverse Problems A. S. Barashkov, 1998-01-01 Inverse problem theory is one of the most important directions of modern mathematics In this monograph for the most part inverse coefficient problems are explored for example Helmholtz equations The coefficient of these equations need to be recovered by certain known information on the solutions of these equations In this book the basic method for studying multidimensional inverse problems is the small parameter method the asymptotic method Such methods are widely used for investigation of direct problems Direct Methods of Solving Multidimensional Inverse Hyperbolic Problems Sergey I. Kabanikhin, Abdigany D. Satybaev, Maxim A. Shishlenin, 2013-04-09 The authors consider dynamic types of inverse problems in which the additional information is given by the trace of the direct problem on a usually time like surface of the domain They discuss theoretical and numerical background of the finite difference scheme inversion the linearization method the method of Gel'fand and Levitan Krein the boundary control method and the projection method and prove theorems of convergence conditional stability and other properties of the mentioned methods Method of Spectral Mappings in the Inverse Problem Theory Vacheslav A. Yurko, 2013-10-10 Inverse problems of spectral analysis consist in recovering operators from their spectral characteristics Such problems often appear in mathematics mechanics physics electronics geophysics meteorology and other branches of natural science This monograph is devoted to inverse problems of spectral analysis for ordinary differential equations Its aim is to present the main results on inverse spectral problems using the so called method of spectral mappings which is one of the main tools in inverse spectral theory The book consists of three chapters In Chapter 1 the method of spectral mappings is presented in the simplest version for the Sturm Liouville operator In Chapter 2 the inverse problem of recovering higher order differential operators of the form on the half line and on a finite interval is considered In Chapter 3 inverse spectral problems for differential operators with nonlinear dependence on the spectral parameter are studied Inverse Problems for Kinetic and Other Evolution Equations Yu. E. Anikonov, 2014-07-24 This monograph deals with methods of studying multidimensional inverse problems for kinetic and other evolution equations in particular transfer equations The methods used are applied to concrete inverse problems especially multidimensional inverse problems applicable in linear and nonlinear statements A significant part of the book contains formulas and relations for solving inverse problems including formulas for the solution and coefficients of kinetic equations differential difference equations nonlinear evolution equations and second order equations Inverse Problems of Mathematical Physics Mikhail M. Lavrent'ev, Alexander V. Avdeev, Viatcheslav I. Priimenko, 2012-05-07 This monograph deals with the theory of inverse problems of mathematical physics and applications of such problems Besides it considers applications and numerical methods of solving the problems under study Descriptions of particular numerical experiments are also included Investigation Methods for Inverse Problems Vladimir G. Romanov, 2014-10-10 This monograph deals with some inverse problems of mathematical physics It

introduces new methods for studying inverse problems and gives obtained results which are related to the conditional well posedness of the problems The main focus lies on time domain inverse problems for hyperbolic equations and the kinetic transport equation

Inverse Problems for Partial Differential Equations Yuriy Ya. Belov, 2012-02-14 This monograph is devoted to identification problems of coefficients in equations of mathematical physics It investigates the existence and uniqueness of the solutions for identification coefficient problems in parabolic and hyperbolic equations and equation systems of composite type The problems are studied with the Cauchy data and equations in which the Fourier transform with respect to the chosen variable is supposed to occur Differential properties of the solutions for the original direct problems and their behavior under great values of time are studied on the basis of solution properties for direct problems The identification problems with one or two unknown coefficients are also investigated For initial boundary value conditions linear and nonlinear parabolic equations are studied

Elements of the Theory of Inverse Problems A. M. Denisov, 2014-07-24 The Inverse and Ill Posed Problems Series is a series of monographs publishing postgraduate level information on inverse and ill posed problems for an international readership of professional scientists and researchers The series aims to publish works which involve both theory and applications in e g physics medicine geophysics acoustics electrodynamics tomography and ecology

Inverse Problems for Kinetic and Other Evolution Equations I[?]U[r]iĭ Evgen'evich Anikonov, IUri i Evgen'evich Anikonov, 2001 This monograph in the Inverse and Ill Posed Problems Series deals with methods of studying multidimensional inverse problems for kinetic and other evolution equations in particular transfer equations The methods used are applied to concrete inverse problems especially multidimensional inverse problems applicable in linear and nonlinear statements A significant part of the book contains formulas and relations for solving inverse problems including formulas for the solution and coefficients of kinetic equations differential difference equations nonlinear evolution equations and second order equations This monograph will be of value and interest to mathematicians engineers and other specialists dealing with inverse and ill posed problems

Carleman Estimates for Coefficient Inverse Problems and Numerical Applications Michael V. Klibanov, Alexander A. Timonov, 2012-04-17 In this monograph the main subject of the author s considerations is coefficient inverse problems Arising in many areas of natural sciences and technology such problems consist of determining the variable coefficients of a certain differential operator defined in a domain from boundary measurements of a solution or its functionals Although the authors pay strong attention to the rigorous justification of known results they place the primary emphasis on new concepts and developments
