Sites Unseen William A. Gleason, 2011 *Sites Unseen* examines the complex intertwining of race and architecture in nineteenth and early twentieth century American culture the period not only in which American architecture came of age professionally in the U S but also in which ideas about architecture became a prominent part of broader conversations about American culture history politics and race relations This rich and copiously illustrated interdisciplinary study explores the ways that American writing between roughly 1850 and 1930 concerned itself often intensely with the racial implications of architectural space primarily but not exclusively through domestic architecture In addition to identifying an archive of provocative primary materials *Sites Unseen* draws significantly on important recent scholarship in multiple fields ranging from literature history and material culture to architecture cultural geography and urban planning Together the chapters interrogate a variety of expressive American vernacular forms including the dialect tale the novel of empire letters and pulp stories along with the plantation cabin the West Indian cottage the Latin American plaza and the OC OrientalOCO parlor These are some of the overlooked plots and structures that can and should inform a more comprehensive consideration of the literary and cultural meanings of American architecture Making sense of the relations between architecture race and American writing of the long nineteenth centuryOCoin their regional national and hemispheric contextsOCO *Sites Unseen* provides a clearer view not only of this catalytic era but also more broadly of what architectural historian Dell Upton has aptly termed the social experience of the built environment [Site Matters](#) Andrea Kahn, Carol J. Burns, 2020-12-21 In the era of the Anthropocene site matters are more pressing than ever Building on the concepts theories and multi disciplinary approaches raised in the first edition this publication strives to address the changes that have taken place over the last 15 years with new material to complement and re position the initial volume Reaching across design disciplines this highly illustrated anthology assembles essays from architects landscape architects urban designers planners historians and artists to explore ways to physically and conceptually engage site Thoughtful discourse and empirically grounded pieces combine to provide the language and theory to contextualize the meanings of site in the built environment The increasingly complex hybridity of constructed environments today demands new tools for thinking about and working with site Drawing contributions from outside and within the traditional design disciplines this edition will trace important developments in site thinking with new essays on topics such as climate change landscape as infrastructure shifts from global to planetary urbanization debates and the proliferation of participatory site transformation practices Edited by two leading practitioners and academics *Site Matters* juxtaposes timeless contributions from individuals including Elizabeth Meyer Robert Beauregard and Robin Dripps with original new writings from Peter Marcuse Jane Wolff Neil Brenner and Thaisa Way amongst others to recontextualize and reignite the debate around site An ideal text for students academics and researchers interested in site and design theory *Catalogue of the University of*

(5 pt.)* ,1996 **Beyond Chaco** Sarah A. Herr,2016-12-15 During the eleventh and twelfth centuries A D the Mogollon Rim region of east central Arizona was a frontier situated beyond and between larger regional organizations such as Chaco Hohokam and Mimbres On this southwestern edge of the Puebloan world past settlement poses a contradiction to those who study it Population density was low and land abundant yet the region was overbuilt with great kivas a form of community level architecture Using a frontier model to evaluate household community and regional data Sarah Herr demonstrates that the archaeological patterns of the Mogollon Rim region were created by the flexible and creative behaviors of small scale agriculturalists These people lived in a land rich and labor poor environment in which expediency mobility and fluid social organization were the rule and rigid structures and normative behaviors the exception Herr s research shows that the eleventh and twelfth century inhabitants of the Mogollon Rim region were recent migrants probably from the southern portion of the Chacoan region These early settlers built houses and ceremonial structures and made ceramic vessels that resembled those of their homeland but their social and political organization was not the same as that of their ancestors Mogollon Rim communities were shaped by the cultural backgrounds of migrants by their liminal position on the political landscape and by the unique processes associated with frontiers As migrants moved from homeland to frontier a reversal in the proportion of land to labor dramatically changed the social relations of production Herr argues that when the context of production changes in this way wealth in people becomes more valuable than material wealth and social relationships and cultural symbols such as the great kiva must be reinterpreted accordingly *Beyond Chaco* expands our knowledge of the prehistory of this region and contributes to our

understanding of how ancestral communities were constituted in lower population areas of the agrarian Southwest

Expanding the View of Hohokam Platform Mounds Mark D. Elson, 2016-12-15 For more than a hundred years archaeologists have investigated the function of earthen platform mounds in the American Southwest Built by the Hohokam groups between A D 1150 and 1350 these mounds are among the few monumental structures in the Southwest yet their use and the nature of the groups who built them remain unresolved Mark Elson now takes a fresh look at these monuments and sheds new light on their significance He goes beyond previous studies by examining platform mound function and social group organization through a cross cultural study of historic mound using groups in the Pacific Ocean region South America and the southeastern United States Using this information he develops a number of important new generalizations about how people used mounds Elson then applies these data to the study of a prehistoric settlement system in the eastern Tonto Basin of Arizona that contained five platform mounds He argues that the mounds were used variously as residences and ceremonial facilities by competing descent groups and were an indication of hereditary leadership They were important in group integration and resource management after abandonment they served as ancestral shrines Elson s study provides a fresh approach to an old puzzle and offers new suggestions regarding variability among Hohokam populations Its innovative use of comparative data and analyses enriches our understanding of both Hohokam culture and other ancient societies **Java 2**

Crafting Preservation Criteria John H. Sprinkle, Jr.,2014-03-05 In 1966 American historic preservation was transformed by the passage of the National Historic Preservation Act which created a National Register of Historic Places Now comprising more than 1 4 million historic properties across the country the National Register is the official federal list of places in the United States thought to be worthy of preservation One of the fundamental principles of the National Register is that every property is evaluated according to a standard set of criteria that provide the framework for understanding why a property is significant in American history The origins of these criteria are important because they provide the threshold for consideration by a broad range of federal preservation programs from planning for continued adaptive use to eligibility for grants and inclusion in heritage tourism and educational programs Crafting Preservation Criteria sets out these preservation criteria for students explaining how they got added to the equation and elucidating the test cases that allowed for their use From artworks to churches from the fifty year rule to the historic scene students will learn how places have been historically evaluated to be placed on the National Register and how the criteria evolved over time
