Cheremisinoff,Paul N. Cheremisinoff,1995-12-31 The management of hazardous materials and industrial wastes is complex requiring a high degree of knowledge over very broad technical and legal subject areas Hazardous wastes and materials are diverse with compositions and properties that not only vary significantly between industries but within industries and indeed within the complexity of single facilities Proper management not only requires an understanding of the numerous and complex regulations governing hazardous materials and waste streams but an understanding and knowledge of the treatment post treatment and waste minimization technologies In fact today s environmental manager must face working within twelve environmental management arenas all of which may be applicable regardless of the size of the operation or business This volume has been written as a desk reference for the Professional Hazards Manager PHM The PHM is a qualified environmental manager that has the responsibility of ensuring that his or her facility or division within the corporation is in compliance with environmental statutes and regulations as well as participating in the selection of technologies and approaches to remediation pollution control and in implementing waste minimization practices These decisions require knowledge and understanding of the federal state and local environmental regulations a working knowledge of the best available technologies and their associated cost This volume provides an overview of both the technology and compliance requirements that will assist environmental managers in addressing facility management of hazardous wastes pollution control and waste minimization The book has been designed in part as a study guide to help prepare qualified individuals for the national certification and registration program of Professional Hazards Managers conducted by the National Association of Safety Health Professionals and other organizations including the Hazard Materials Control Resources Institute HMCRI and Fairleigh Dickinson University **Research Reporting Series** ,1975 **Journal of the Western Society of Engineers** Western Society of Engineers (Chicago, Ill.),1922 Agrindex ,1983 EPA-600/8 ,1980-07 **Advanced Bases** United States. Proceedings of the ... Annual Meeting of the Conference of Mayors and Other Municipal Officials of the State of New York Conference of Mayors and Other Municipal Officials of the State of New York,1916 Proceedings of the Annual Meeting New York State Conference of Mayors and Other Municipal Officials,1916 Environmental Pollution and Control J. Jeffrey Peirce,P Aarne Vesilind,Ruth Weiner,1998-01-15 Complex environmental problems are often reduced to an inappropriate level of simplicity While this book does not seek to present a comprehensive scientific and technical coverage of all aspects of the subject matter it makes the issues ideas and language of environmental engineering accessible and understandable to the nontechnical reader Improvements introduced in the fourth edition include a complete rewrite of the chapters dealing with risk assessment and ethics the introduction of new theories of radiation damage inclusion of environmental disasters like Chernobyl and Bhopal and general updating of all the content specifically that on radioactive waste Since this book was first published in 1972 several generations of students have become environmentally aware and conscious of their responsibilities to the planet earth Many of these environmental pioneers are now teaching in colleges and universities and have in their classes students with the same sense of dedication and resolve that they themselves brought to the discipline In those days it was sometimes difficult to explain what indeed environmental science or engineering was and why the development of these fields was so important to the future of the earth and to human civilization Today there is no question that the human species has the capability of destroying its collective home and that we have indeed taken major steps toward doing exactly that And yet while a lot has changed in a generation much has not We still have air pollution we still contaminate our water supplies we still dispose of hazardous materials improperly we still destroy natural habitats as if no other species mattered And worst of all we still continue to populate the earth at an alarming rate There is still a need for this book and for the college and university courses that use it as a text and perhaps this need is more acute now than it was several decades ago Although the battle to preserve the environment is still raging some of the rules have changed We now must take into account risk to humans and be able to manipulate concepts of risk management With increasing population and fewer alternatives to waste disposal this problem is intensified Environmental laws have changed and will no doubt continue to evolve Attitudes toward the environment are often couched in what has become known as the environmental ethic Finally the environmental movement has become powerful politically and environmentalism can be made to serve a political agenda In revising this book we have attempted to incorporate the evolving nature of environmental sciences and engineering by adding chapters as necessary and eliminating material that is less germane to today s students We have

nevertheless maintained the essential feature of this book to package the more important aspects of environmental engineering science and technology in an organized manner and present this mainly technical material to a nonengineering audience This book has been used as a text in courses which require no prerequisites although a high school knowledge of chemistry is important A knowledge of college level algebra is also useful but calculus is not required for the understanding of the technical and scientific concepts We do not intend for this book to be scientifically and technically complete In fact many complex environmental problems have been simplified to the threshold of pain for many engineers and scientists Our objective however is not to impress nontechnical students with the rigors and complexities of pollution control technology but rather to make some of the language and ideas of environmental engineering and science more understandable
