

Smelling

A young boy with dark hair, wearing a green long-sleeved shirt, is holding a large fish vertically in his right hand. He is holding his left hand up to his nose, appearing to smell the fish. The background is a bright orange with yellow wavy lines. The title 'Smelling' is written in large white letters at the top. In the bottom right corner, there is a green box with the words 'First Facts' in white. At the bottom center, the author's name 'by Rebecca Olien' is written in white. On the left edge, there is a small red and white label with the word 'Seed' and some other text.

Smelling First Facts:

Smelling Rebecca Olien, 2006 Explains the sense of smell and how the nose work as sense organs **My Amazing Sense of Smell** Ruth Owen, 2014-01-01 From taking a close up look at the parts of a nose to learning how our noses work as a team with our brain My Amazing Sense of Smell explores everything to do with how we smell What exactly is a smell made of How do we recognize smells And what exactly is snot all about These questions and many more will be answered in this lively fact packed new book for young readers **Hearing** Rebecca Olien, 2006 Explains the sense of hearing and how the ears work as sense organs *Tasting* Rebecca Olien, 2006 Explains the sense of taste and how the tongue works as a sense organ Perceptual Content William G. Lycan, 2024-03-13 Perceptual Content is the first book to discuss and compare the representational characters of all the traditional five senses It has three main topics or concerns 1 The diversity of the senses though Lycan maintains as a working assumption that all perception represents the similarity between sense modalities ends there The senses respective representational modes styles and structures not just their mechanisms differ very strongly from each other 2 The Layering thesis Lycan argues that a single sensory representation usually has more than one content the contents systematically related to each other by a priority or dependence relation More specifically a perceptual state may represent one object or property by representing a more primitive or less ambitious one he calls this the layering of content For example by hearing a sound sequence involving such and such volumes and timbres you hear a voice speaking and by hearing the voice you hear words in a language In some modalities layering works unexpectedly nearly all tactile representation derives from representation of conditions of or in the subject s own skin meaning that touch represents e g the texture of a physical object by and only by representing stress within the skin and even among the skin conditions some are represented only by representing more primitive ones 3 Aspect perception despite Wittgenstein s famous discussion of seeing as in a late section of Philosophical Investigations little has been written on perceiving as Besides its intrinsic interest even popular appeal what with joke ambiguous figures such as the duck rabbit and the old young woman it remains especially mysterious Nearly all work on it has concerned vision only But it is crucial for understanding auditory representation which is one thing that distinguishes hearing from the other senses Further the auditory case severely damages what Lycan and others had thought was the best approach to understanding aspect perception in terms of attention

Seeing Rebecca Olien, 2005-09 Explains the sense of sight and how the eyes work as sense organs Elements of Physiology Rudolph von Wagner (Professor of Physiology at Gottingen.), 1844 **Learning to Smell** Donald A. Wilson, Richard J. Stevenson, 2006-06-06 Written by a neurobiologist and a psychologist this volume presents a new theory of olfactory perception Drawing on research in neuroscience physiology and ethology Donald A Wilson and Richard J Stevenson address the fundamental question of how we navigate through a world of chemical encounters and provide a compelling

alternative to the reception centric view of olfaction The major research challenge in olfaction is determining how the brain discriminates one smell from another Here the authors hold that olfaction is generally not a simple physiochemical process but rather a plastic process that is strongly tied to memory They find the traditional approach which involves identifying how particular features of a chemical stimulus are represented in the olfactory system to be at odds with historical data and with a growing body of neurobiological and psychological evidence that places primary emphasis on synthetic processing and experiential factors Wilson and Stevenson propose that experience and cortical plasticity not only are important for traditional associative olfactory memory but also play a critical defining role in odor perception and that current views are insufficient to account for current and past data The book includes a broad comparative overview of the structure and function of olfactory systems an exploration into the mechanisms of odor detection and olfactory perception and a discussion of the implications of the authors theory Learning to Smell will serve as an important reference for workers within the field of chemical senses and those interested in sensory processing and perception
