Dowling,2002-11-01 Until the 1960s maths was studied as an academic subject in a desire to have more mathematicians The current trend however has moved away from viewing maths as a purely intellectual endeavour and towards developing a more mathematically competent workforce and citizenry This trend has seen a large increase in the number of maths schemes being produced by the major educational publishers which attempt to make maths easier and more approachable by using language instead of symbols So why do so many children still fail at maths The author contends that to understand this teachers need to analyze and evaluate the maths textbooks they are currently using The author shows the reader how to systematically analyze and evaluate these textbooks This interrogation of classroom resources should have important implications for teaching strategies and for textbook design and use **Doing Research/Reading Research** Paul

Dowling,Andrew Brown,2012-12-06 This bestselling text enables beginning researchers to organise and evaluate the research they read and to plan and implement small scale research projects of their own It gives structured practical guidance on the development of a research question techniques of data collection qualitative and quantitative forms of analysis the writing and dissemination of research The authors present research as a principled activity that begins with the establishing and structuring of theoretical and empirical fields and research findings as serving to ask questions of educational practice rather than directing it This revised and updated second edition includes a new chapter dealing with the complex issue of research ethics It also includes consideration of digital technologies and new media both as settings of research and research tools the chapters on qualitative and quantitative analysis have been expanded and the annotated bibliography updated The authors have been active researchers in educational studies for more than twenty years They have

X-Ray and Neutron Reflectivity: Principles and Applications Jean Daillant, Alain Gibaud, 2003-07-01 The reflection of x rays and neutrons from surfaces has existed as an experimental technique for almost 50 years. Nevertheless only in the last few decades have these methods become as popular as probes of surfaces and interfaces. This is due to the convergence of intense different circumstances. These include the more availability of measured orders of magnitude and sources that can cover so much reflectivity. x ray many of the much weaker surface diffuse can now also be measured. Scattering of thin films and studied in some detail growing importance multi basic the realization of the effects in both technology research important which in the of surfaces and role roughness plays properties interfaces the of statistical models to characterize the of finally development topology its and its characterization from on roughness dependence growth processes.
