Advances in Information Processing and Protection Jerzy Pejas, Khalid Saeed, 2007-09-29 The Computer Science is relatively new field which is developing very fast not only because due to the huge interest of scientists and the market

request but also because this science has created possibilities for people of investigation and solved many problems that some time ago seemed to be insolvable. Such problems had only been described in science fiction novels like underwater journeys of captain Nemo described by Jules Verne in XIX century. At present various human dreams are successively becoming reality exactly as the underwater journeys became possible in the XX century. The proposed book gives you a view of the progress in such domains of Computer Science as Artificial Intelligence, Biometrics, Security of Information Technology, Computer Information Systems and Industrial Management. The works contained in the book describe the newest investigation results of devoted scientists from Europe and Asia. The book is written in a hard scientific language. It is really valuable and I am sure it will deliver you many scientific benefits. Professor Andrzej Piegat, Szczecin University of Technology, Faculty of Computer Science and Information Systems and University of Szczecin, Poland, Faculty of Economic Sciences and Management. ACKNOWLEDGMENTS: We would like to express our indebtedness to all professors and IPC Members who took upon themselves the task of reviewing the papers presented in this book. They are **Real World Data Mining**

Applications Mahmoud Abou-Nasr, Stefan Lessmann, Robert Stahlbock, Gary M. Weiss, 2014-11-13. Data mining applications range from commercial to social domains with novel applications appearing swiftly for example within the context of social networks. The expanding application sphere and social reach of advanced data mining raise pertinent issues of privacy and security. Present day data mining is a progressive multidisciplinary endeavor. This inter and multidisciplinary approach is well reflected within the field of information systems. The information systems research addresses software and hardware requirements for supporting computationally and data intensive applications. Furthermore it encompasses analyzing system and data aspects and all manual or automated activities. In that respect research at the interface of information systems and data mining has significant potential to produce actionable knowledge vital for corporate decision making. The aim of the proposed volume is to provide a balanced treatment of the latest advances and developments in data mining in particular exploring synergies at the intersection with information systems. It will serve as a platform for academics and practitioners to highlight their recent achievements and reveal potential opportunities in the field. Thanks to its multidisciplinary nature the volume is expected to become a vital resource for a broad readership ranging from students throughout engineers and developers to researchers and academics. Advances in Image and Video Segmentation Zhang, Yu-Jin, 2006-05-31. This book attempts to bring together a selection of the latest results of state of the art research in image and video segmentation one of the most critical tasks of image and video analysis that has the objective of extracting information represented by data from an image or a sequence of images video.
