Handbook of Computability Theory E.R. Griffor, 1999-10-01 The chapters of this volume all have their own level of presentation The topics have been chosen based on the active research interest associated with them Since the interest in some topics is older than that in others some presentations contain fundamental definitions and basic results while others relate very little of the elementary theory behind them and aim directly toward an exposition of advanced results Presentations of the latter sort are in some cases restricted to a short survey of recent results due to the complexity of the methods and proofs themselves Hence the variation in level of presentation from chapter to chapter only reflects the conceptual situation itself One example of this is the collective efforts to develop an acceptable theory of computation on the real numbers The last two decades has seen at least two new definitions of effective operations on the real numbers

Shore, 1985

Proceedings Of The 13th Asian Logic Conference Xishun Zhao, Qi Feng, Byunghan Kim, Liang Yu, 2015-03-05 This volume provides a forum which highlights new achievements and overviews of recent developments of the thriving logic groups in the Asia Pacific region It contains papers by leading logicians and also some contributions in computer science logics and philosophic logics **Effective Mathematics of the Uncountable** Noam Greenberg, Joel David Hamkins, Denis Hirschfeldt, Russell Miller, 2013-10-31 A comprehensive introduction to eight major approaches to computation on uncountable mathematical domains
